6. ALTERNATE HEAT EXCHANGERS TO SHIFT LAG/LEAD DUTIES TO PROVIDE EVEN WEAR.
7. WHEN THE HOT WATER SYSTEM IS ENABLED THE BAS CONTROL SYSTEM WILL START THE LEAD PUMP (IN AND AWAY MODE) AND ALLOW SWITCH (FS-1). THEN ENABLE THE HEAT EXCHANGER CONTROL PANEL (CP-1). THEN SIGNAL A START CONDITION.
8. THE LAG PUMP (P-2) AND HEAT EXCHANGER (HX-2) SHALL START WHEN THE LEAD PUMP HAS BEEN ON FOR 20 MINUTES AND THE LEAD PUMP IS ON FOR 30 MINUTES ADJUSTABLE. THE LAG HEAT EXCHANGER SHALL ON UNTIL BOTH UNITS HAVE OPERATED ON LOW STEAM INPUT FOR A PERIOD OF 30 MINUTES ADJUSTABLE.
9. IF THE LEAD HEAT EXCHANGER FAILS TO START, AN ALARM SHALL BE SIGNALED, THE LEAD PUMP SHALL STOP AND THE LAG PUMP AND HEAT EXCHANGER SHALL START.
10. DOMESTIC WATER HEATING HEAT EXCHANGER SHALL MODULATE THE STEAM VALVE (V-1,2) TO MAINTAIN A DISCHARGE WATER TEMPERATURE OF 140 DEG F. DOMESTIC HOT WATER PUMP AND BALANCING VALVES SHALL BE BALANCED AND SET TO A MAXIMUM TEMPERATURE LOSS OF 10 DEG-F.
11. WHEN THE UNIT IS SHUT DOWN, ALL COIL VALVES SHALL BE CLOSED.
12. DISCHARGE TEMPERATURE SHALL BE RESET BASED ON OUTDOOR AIR TEMPERATURE AS FOLLOWS: (OR OTHERWISE SHOWN ON DRAWINGS) ON OUTSIDE AIR 60 DEG F OR LOWER), PROVIDE 140 DEG F WATER WHEN OUTSIDE AIR IS 75 DEG F (OR GREATER). ON INCREASE OF ZONE HEATING DEMAND, THE DISCHARGE TEMPERATURE SHALL BE RESET UPWARD TO MAINTAIN SPACE CONDITIONS.
13. DISCHARGE TEMPERATURE SHALL BE RESET UNDER NIGHT SET BACK CONTROL.
14. RESET TEMPERATURES TO BE ADJUSTABLE WITHIN BAS.

SEQUENCE OF OPERATION

1. ON A RUN COMMAND, THE SEQUENCE CONTROLLER SHALL SELECT AND START THE LEAD PUMP. THE PUMP SHALL RUN CONTINUOUSLY UNTIL IT IS SHUT DOWN.
2. A FLOW SWITCH SHALL VERIFY PUMP OPERATION. SHOULD THE SWITCH FAIL TO INDICATE FLOW, A FLOW ALARM SHALL BE REPORTED AND THE SEQUENCE CONTROLLER SHALL STOP THE LEAD PUMP (P-1), AND START THE LAG PUMP (P-2).
3. A DIFFERENTIAL PRESSURE SENSOR (DP) SHALL BE LOCATED BETWEEN THE SUPPLY AND RETURN MAINS NEAR THE FAR END OF THE DISTRIBUTION SYSTEM. THE PRESSURE DIFFERENTIAL SHALL BE MAINTAINED BY VARYING THE SPEED OF THE PUMP AS REQUIRED TO MEET FIELD SET MINIMUM DIFFERENTIAL PRESSURE.
4. THE ALTERNATOR SHALL ALTERNATE WHICH PUMP IS THE LEAD PUMP ON EACH START CYCLE TO PROVIDE EVEN WEAR.
5. HIGH AND LOW SYSTEM PRESSURE ALARMS AND LOW FLOW ALARMS SHALL BE INDICATED SHOULD THE DIFFERENTIAL PRESSURE EXCEED THE RESPECTIVE SETPOINTS.
6. SHOULD ONE PUMP BE UNABLE TO MAINTAIN THE DIFFERENTIAL PRESSURE SETPOINT, THE SEQUENCE CONTROLLER SHALL START THE LAG PUMP. DURING THE START OF THE SECOND PUMP, THE SPEED OF THE FIRST PUMP SHALL BE REDUCED TO MATCH THE SPEED OF THE SECOND PUMP. THE SPEED OF BOTH PUMPS SHALL THEN BE MODULATED TOGETHER AS REQUIRED TO MAINTAIN SETPOINT.
7. A MODULATING MINIMUM FLOW VALVE LOCATED NEAR THE END OF EACH BRANCH MAIN SHALL ASSIST TO MAINTAIN MINIMUM PUMP FLOW RATE WHEN REQUIRED. THE MINIMUM FLOW CONTROL VALVE SHALL MODULATE OPEN AS REQUIRED TO MAINTAIN SET POINT. WHEN PUMP IS OPERATING ABOVE MINIMUM FLOW RATE THE VALVE SHALL BE FULLY CLOSED.

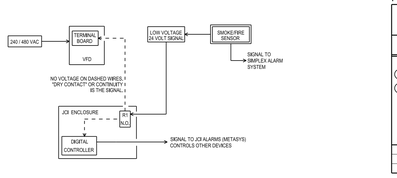
SEQUENCE OF OPERATION

1. WHEN SPACE TEMPERATURE FALLS BELOW SET POINT THE HEATER SHALL OPEN HOT WATER VALVE. HEATER SHALL CONTINUE TO OPERATE UNTIL SPACE TEMPERATURE RISES ABOVE SET POINT. AT WHICH TIME THE HEATER SHALL CLOSE HOT WATER VALVE. BAS SHALL MONITOR OPERATION SCHEDULE.
2. HEATER SHALL SHUT DOWN ON FIRE ALARM.
3. HEATER SETPOINT SHALL BE SET BACK DURING UNOCCUPIED HOURS.

HOT WATER CONVECTORS



SEQUENCE OF OPERATION

1. SMOKE/FIRE SENSOR TRIPS AND SENDS A SIGNAL TO SIMPLEX UNIT.
2. SMOKE/FIRE SENSOR TRIPS R1 IN THE JCI BOX.
3. R1 PROVIDES A DRY CONTACT SIGNAL (BIO).
   A) TO THE VFD TERMINAL BOARD AS INPUT TO SHUT DOWN VFD POWER.
   B) TO THE JCI CONTROLLER FOR JCI CONTROLS AND ALARMS
   - SELF MONITORING CIRCUIT: IF A LOSS OF POWER OCCURS OR A WIRE IS CUT THE SYSTEM ACTIVATES.
   - R1 IS A NORMALLY OPEN (NO) RELAY MEANING POWER KEEPS THE CONTACTS CLOSED. CLOSED
   - R1 PROVIDES A DRY CONTACT (BIO) TO THE VFD TERMINAL BOARD. ACTS LIKE A CLOSED OR TURNED ON SWITCH, CUTTING THE POWER LINE TO R1 ON CUTTING THE OUTPUT WIRES FROM R1 WILL CAUSE A CHANGE OF STATE AND ACTIVATE FIRE/SMOKE PROTOCOLS.
   - IT IS PREFERRED THAT R1 BE PHYSICALLY LOCATED IN THE JCI ENCLOSURE, AS SHOWN, BECAUSE THE INDICATOR LIGHT ON THE RELAY IS A SYSTEM TROUBLE SHOOTING AID. VFD ENCLOSURES HAVE SAFETY INTERLOCKS AND OPENING THE VFD DOOR WILL SHUT DOWN THE UNIT.
