 VHA NATIONAL FORMULARY
 Oct-12

The VANF is dosage form specific. If a specific dosage form is not listed, the specific product in question should be considered non-formulary (although other dosage forms of that molecular entity may be included as formulary). Dosage forms such as TAB and CAP, ORAL are considered immediate release. Sustained release products are listed individually. Formulary products may also be available in many dosage forms and strengths. In the case of products with multiple dosage forms and strengths, not all forms and strengths need to be stocked. Facilities should make those dosages available that are necessary to meet their patient needs."

R The national restriction for antibiotics is that all decisions regarding which agents to carry in these classes will be made at the local or VISN level. These decisions should be based on local culture and sensitivity patterns. The restriction for all other products is as otherwise noted.

VA Class	Restriction	Generic	Dosage Form	Comments	Clinical Guidance		Special Handling
AD600		ACETYL CYSTEINE	INJ, SOLN				
AD900		CHARCOAL ACTIVATED (OTC)	LIQUID
