

Defining Parallel, Totally Redundant, and Full Flow

PARALLEL

2 Heat Exchangers

1 DRV

Piping Increased to Allow DRV to Accept Flow from Both Heat Exchangers Simultaneously

TOTALLY REDUNDANT

2 Heat Exchangers

2 DRV's

Flow from only 1 Heat Exchanger through 1 DRV.

Second Heat Exchanger and DRV are designed for back-up only, and not simultaneous operation.

FULL FLOW

2 Heat Exchangers

2 DRV's

Both Heat Exchangers and DRV's are designed to operate simultaneously.
