

REQUEST FOR INFORMATION

REPLACE EXTERIOR SIGNAGE

What points of connections are available for the electrical signs?

VA: Use the POCs shown on plans. Verify adequate power is available and provide the correct power control.

Are there infection control requirements to get into the pharmacy?

VA: There are no infection control requirements to get into the pharmacy.

There is conduit that is located along the parapet on the 7th floor penthouse, can that be re-used?

VA: Yes, the conduit along the parapet may be re-used. Please check the specifications for the “rules” on re-use of wire and breakers.

The light pole shown for sign A3 is not physically there. Is installing the light pole part of this contract?

VA: No, the light pole will be installed by the VA.

Sign Type XB1 – cannot bid without more specification. We need specs on the LED/lighting manufacturer, and better design intentions, size of lighting element, etc. Are they colored LEDs, white LEDs, or lamps? Unsure because the letters are already illuminated, do they want to shine light on the backer panels?

VA: The xB1 has 2 LED components. The drawings are design intent; the selected bidder will submit shop drawings for review and approval. The upper band is a color changing LED strip, exact LED fixture by bidder. The Channel letters are white LED lights with face illumination.

On all stone veneer signs – NEED STONE SPEC. Unable to obtain pricing without it.

VA: Previous stone veneer utilized on campus is ELDORADO STONE STACKED STONE BLK RIVER FLAT BB. The stone veneer on the bases of the signs will match the type and style of existing stone veneers at the facility. The color of the stone is yet to be decided, therefore the VA will require color samples be submitted so the facility can make a selection.
