

RFIs

1. Will both the chemical treatment and the testing be provided by the same company?
Chemical treatment and testing will be provided by the same company.
2. Is periodical maintenance and service the responsibility of the company?
Periodic maintenance and service is the responsibility of the company.
3. How many samples need to be collected per hot water and chill water loops?
Legionella sampling and testing is done at the cooling towers.
4. What kind of chemical needs to be tested (please specify)?
Since you are adding a rust and corrosion inhibiting substance to the Chill Water and Heating Hot Loops at each building, samples can be taken at the chemical feeder pots in each system.
5. Please clarify the bacteriological testing in the case of Menlo Park Division and Livermore Division only includes *Legionella* or also heterotrophic bacterial counts.
Only Legionella testing is required for the towers.
6. Please also clarify the total number of cooling towers that need to be tested for Legionella on a monthly basis besides the total number of samples for the water loops.
Each loop is sampled individually per building from a common point for chemical levels. Cooling towers are tested individually for Legionella presence.
