

**VENDOR Q & A Set #2**  
**VISN 23 DR ROOM SPECIAL CONSOLIDATION**  
**VA797R-16-Q-0018**

**Q30:** In each benchmark there is a note that identifies a fixed detector in the table and wall, but then it explains VISN 23 requires a wireless detector that can move in between rooms as needed. The question is about the wireless detector that can move between rooms. In the example below, should we quote three wireless detectors (one per benchmark a total of 11 detectors for Omaha) or was the intention to quote one wireless to use between rooms (a total of 9 detectors for Omaha)?

	Table	Wall	Wireless	Small
Omaha 618-B69018	Y	Y	Y	Y
Omaha 618-B69019	Y	Y	Y	Y
Omaha 618-B69020	Y	Y	Y	N

**A30:** Please quote number of detectors based on the specifications and the summary table. For Omaha that is a total of 11 detectors (3 fixed wall, 3 fixed table, 3 wireless and 2 small wireless detectors).

**Q31:** With respect to wireless detector requirements, the written responses state that vendors should quote per the solicitation. Please verify that a third wireless "floating" detector is being requested in each room within those facilities requesting the third detector. Said differently, where applicable, the wireless detectors are to be quoted by room, per the solicitation, and not by each facility.

**A31:** Please refer to the example in A30 above.
