

## **RFIs for VA257-17-Q-0243 Workstations for Waco VA Call Center**

Q1. I have reviewed the specification portion of the stations and it appears we can provide the products that you are asking for, with the exception being for the pre-wired power poles. Our power poles will need to have the in-feeds installed in them on site. Will that be a disqualifying issue?

A1. If the company is the one that will install the in-feeds into the power poles on site.

Q2. While waiting for the station layouts or floorplan to be released, is it safe to assume that we are providing the (1) typical outlined in the SOW? The documents mention Room #'s and amounts but there isn't any way to tell how they are arranged. Just wanted to confirm that you are only expecting the 1 typical station model.

A2. Yes – it is safe to assume that the company will provide the typical outlined in the SOW. The line items listed to comprise the workstations needed and the quantity needed. There are three horizontal rows of workstations – with 10 workstations at each row – back to back.

Q3. Is the awarded SDVOSB required to hold a GSA contract in order to bid? We would be able to provide you with the GSA equivalent price either way, just wanted to know so that we can have the proper paperwork in order before submitting our bid.

A3. No, the SDVOSB is not required to hold a GSA contract for this requirement.
