### Hemodialysis Concentrate Formulations (Dialysate)

Dialysate, also called dialysis fluid, dialysis solution or bath, is a solution of pure water, electrolytes and salts, such as bicarbonate and sodium. The purpose of dialysate is to pull toxins from the blood into the dialysate. The way this works is through a process called diffusion. There are various formulations of dialysate with different amounts of sodium, calcium, potassium, magnesium, chloride, acetate, dextrose and bicarbonate.
