

AREA OF EXCAVATION
Not to Scale

Drain
Swell

Poly gas line
Area to be excavated
to depth of building wall

EXCAVATION NOTES

- 1) Excavate to bottom of building wall, approx. 7'.
- 2) Backslope side of ditch per OSHA Trenching guidelines.
- 3) Exterior wall of building to be cleaned using high pressure water blast to remove all dirt and loose material
- 4) Exterior of wall to be coated with bituminous dampproofing per specification 071113.
- 5) After inspection by COTR place compacted backfill to level for gravel fill for trench drain.
- 6) Install 3' wide 4" thick mow strip at ground level.
- 7) Caulk joint between mow strip and fill with elastomeric caulk per specifications 079200.
- 8) Pine tree is to remain, protect as needed from damage.

TRENCH DRAIN
Not to Scale

4" Slotted Drain Pipe
Slope to Stairwell @ 1/8" per Foot

TRENCH DRAIN NOTES

- 1) Trench drain to be 4" PVC slotted pipe.
- 2) Cover slotted section of pipe with galvanized screen to prevent fine material from entering and clogging the drain.
- 3) Place 3/4" gravel to bed pipe and to cover pipe a minimum of 6".
- 4) Drain line is to slope a minimum of 1/8" per foot to stairwell on South side.
- 5) Penetrate wall of stairwell to allow pipe to drain.
- 6) Cover end of pipe with a mesh screen to prevent animal intrusion that might prevent drainage.
- 7) See trench drain detail below.

GENERAL NOTES

- 1) DAVIS/BACON WAGE RATES TO APPLY.
- 2) CONTRACTOR TO FIELD VERIFY ALL DIMENSIONS.
- 3) CONTRACTOR IS TO REPAIR ALL DAMAGE TO LAWNS THAT IS INCURRED DURING THE PROJECT.
- 4) VERIFY LOCATION OF LAWN SPRINKLER HEADS WITH VA GROUNDS PERSONNEL PRIOR TO START OF WORK.
- 5) SOME WORK IS IN A PATIENT CARE SETTING. PROVIDE PROTECTION AS NECESSARY.
