

SECTION 01 00 00
GENERAL REQUIREMENTS

1.1 GENERAL INTENTION

- A. Contractor shall completely prepare site for construction operations, including demolition and removal of existing walls, flooring, and utilities that interfere with construction as needed. The contractor shall also furnish labor and materials and perform work for "Pharmacy Walls", VA Project#503-12-204 as required by drawings and specifications.
- B. Visits to the site by Bidders may be made only by appointment with the Medical Center Engineering Officer.
- C. VA Medical Center Engineering Office, will render certain technical services during construction. Such services shall be considered as advisory and shall not be construed as expressing or implying a contractual act of the Government without affirmations by Contracting Officer or his duly authorized representative.
- D. Before placement and installation of work subject to tests by testing laboratory retained by Department of Veterans Affairs, the Contractor shall notify the COTR in sufficient time to enable testing laboratory personnel to be present at the site in time for proper taking and testing of specimens and field inspection. Such prior notice shall be no less than three work days unless otherwise designated by the COTR.
- E. Under the Green Environmental Management System (GEMS), the contractor is required to consider green materials and processes for all materials and processes not otherwise specified or detailed wherever possible and must provide documentation as to why such could not be used if not used. Cost is an acceptable reason to forgo such.
- F. The contractor shall provide to the COTR the attached DAILY LOG - Formal Contract and DAILY LOG - Safety/ILSM Checklist daily. Weekly payrolls for all construction personnel (including the general contractor and all subcontractors) performing work at the construction site will be provided to the Contracting Officer weekly. Once a contractor entity starts work at the VA jobsite, payrolls will need to be submitted for that entity weekly until work for that entity is complete, even if no work is performed.
- G. All employees of general contractor and subcontractors shall comply with VA security management program and obtain permission of the VA police,

be identified by project and employer, and restricted from unauthorized access.

- H. Prior to commencing work, general contractor shall provide proof that a OSHA certified "competent person" (CP) (29 CFR 1926.20(b)(2)) will maintain a presence at the work site whenever the general or subcontractors are present.

I. Training:

1. Written documentation is to be provided for each employee of the general contractor and subcontractors that indicates that the employee has competency safety training relevant to the work that the employee will be performing. This documentation will be signed by the employing general contractor or subcontractor.
2. Submit this documentation of all such employees for approval before the start of work.
3. In addition, prior to starting any work at this VAMC, all **contractor and subcontractor employees** will be required to view four videos as follows:

1. Safety (approximate duration of 15 minutes)
2. Infection Control (approximate duration of 20 minutes)
3. Privacy (approximate duration of 25 minutes)
4. Hand Hygiene (approximate duration of 15 minutes)

Each employee will be required to pick up an infection control orientation booklet. The completion of these items will be documented by the contractor for each employee.

J. ID BADGES:

1. Prior to start of work, all Contractor employees, sub-contractors, technical support personnel, and associates (herein referred to as Contractor) will be required to obtain ID Badges from VA Police.
 - a. Contractor will first be interviewed by Engineering and Human Resources personnel. Interviews will focus on general background, and will document any identifying characteristics such as tattoo's or other body markings. VA will use the following form: REQUEST FOR PERSONAL IDENTITY VERIFICATION CARD:
http://www.sc.edu/nursing/HCAO/va/VA0711_IDBadgeForm.pdf

b. Contractor will then be fingerprinted by VA Police. Before fingerprinting, contractor will be required to produce two forms of identification, one of which will be a photo ID.

Several acceptable forms of identification are:

- Drivers License
- Social Security Card
- Passport
- Military ID
- Naturalization Documents

c. A background check will then be initiated based on the information obtained from the above. If the background check reveals unsatisfactory results in the opinion of VA, the contractor will not be allowed to work on VA property.

* * * This process may take up to 3-weeks. * * *

1.2 STATEMENT OF BID ITEM(S)

A. ITEM I, GENERAL CONSTRUCTION: Work includes general construction, alterations, minor demolition of existing walls, minor equipment relocation, non-structural framing and electrical installation.

1.3 FIRE SAFETY

A. Applicable Publications: Publications listed below form part of this Article to extent referenced. Publications are referenced in text by basic designations only.

1. American Society for Testing and Materials (ASTM)

E84-1998.....Surface Burning Characteristics of Building
Materials

2. National Fire Protection Association (NFPA):

10-1998.....Standard for Portable Fire Extinguishers

FCLCH-30-2000.....Flammable and Combustible Liquids Code

51B-1999.....Standard for Fire Prevention During Welding,
Cutting and Other Hot Work

70-2000.....National Electrical Code

241-2000.....Standard for Safeguarding Construction,
Alteration, and Demolition Operations

3. Occupational Safety and Health Administration (OSHA)

29 CFR 1926.....Safety and Health Regulations for Construction

- B. Fire Safety Plan: Establish and maintain a fire protection program in accordance with 29 CFR 1926. Prior to start of work, prepare a plan detailing project-specific fire safety measures, including periodic status reports, and submit to COTR for review for compliance with contract requirements in accordance with Section 01 33 23, SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES. Prior to any worker for the contractor or subcontractors beginning work, they shall undergo a safety briefing provided by the general contractor's competent person per OSHA requirements. This briefing shall include information on the construction limits, VAMC safety guidelines, means of egress, break areas, work hours, locations of restrooms, use of VAMC equipment, etc. Documentation shall be provided to the COTR that individuals have undergone contractor's safety briefing.
- C. Site and Building Access: Maintain free and unobstructed access to facility emergency services and for fire, police and other emergency response forces in accordance with NFPA 241.
- D. Separate temporary facilities, such as trailers, storage sheds, and dumpsters, from existing buildings and new construction by distances in accordance with NFPA 241. For small facilities with less than 6 m (20 feet) exposing overall length, separate by 3m (10 feet).
- E. Temporary Construction Partitions:
1. Install and maintain temporary construction partitions to provide smoke-tight separations between adjoining areas. Construct partitions of gypsum board on both sides of metal steel studs. Extend the partitions through suspended ceilings to floor slab deck or roof. Seal joints and penetrations. At door openings, install Class C, ¾ hour fire/smoke rated doors with self-closing devices.
 2. Install fire-rated temporary construction partitions as shown on drawings to maintain integrity of existing exit stair enclosures, exit passageways, fire-rated enclosures of hazardous areas, horizontal exits, smoke barriers, vertical shafts and openings enclosures.
 3. Close openings in smoke barriers and fire-rated construction to maintain fire ratings. Seal penetrations with listed through-penetration firestop materials.
- F. Temporary Heating and Electrical: Install, use and maintain installations in accordance with 29 CFR 1926, NFPA 241 and NFPA 70.

- G. Means of Egress: Do not block exiting for occupied buildings, including paths from exits to roads. Minimize disruptions and coordinate with COTR.
- H. Egress Routes for Construction Workers: Maintain free and unobstructed egress. Inspect daily. Report findings and corrective actions weekly to COTR.
- I. Fire Extinguishers: Provide and maintain extinguishers in construction areas and temporary storage areas in accordance with 29 CFR 1926, NFPA 241 and NFPA 10.
- J. Flammable and Combustible Liquids: Store, dispense and use liquids in accordance with 29 CFR 1926, NFPA 241 and NFPA 30.
- K. Sprinklers: Install, test and activate new automatic sprinklers prior to removing existing sprinklers.
- L. Existing Fire Protection: Do not impair automatic sprinklers, smoke and heat detection, and fire alarm systems, except for portions immediately under construction, and temporarily for connections. Provide fire watch for impairments more than 4 hours in a 24-hour period. Request interruptions in accordance with Article, OPERATIONS AND STORAGE AREAS, and coordinate with COTR. All existing or temporary fire protection systems (fire alarms, sprinklers) located in construction areas shall be tested as coordinated with the medical center. Parameters for the testing and results of any tests performed shall be recorded by the medical center and copies provided to the COTR.
- M. Smoke Detectors: Prevent accidental operation. Remove temporary covers at end of work operations each day. Coordinate with COTR.
- N. Hot Work: Perform and safeguard hot work operations in accordance with NFPA 241 and NFPA 51B. Coordinate with COTR. Obtain permits from facility Safety Officer at least 48 hours in advance. Designate contractor's responsible project-site fire prevention program manager to permit hot work.
- O. Fire Hazard Prevention and Safety Inspections: Inspect entire construction areas weekly. Coordinate with, and report findings and corrective actions weekly to COTR.
- P. Smoking: Smoking is prohibited in and adjacent to construction areas inside existing buildings and additions under construction. In separate and detached buildings under construction, smoking is prohibited except in designated smoking rest areas.
- Q. Dispose of waste and debris in accordance with NFPA 241. Remove from buildings daily.

- R. Perform other construction, alteration and demolition operations in accordance with 29 CFR 1926.
- S. If required, submit documentation to the COTR that personnel have been trained in the fire safety aspects of working in areas with impaired structural or compartmentalization features.
- T. Interim Life Safety Measures shall be implemented by the contractor according to the requirements listed at the end of this section entitled INTERIM LIFE SAFETY MEASURES (Facilities Department Memorandum, dated April 15, 1998), along with all three (3) attachments: ATTACHMENT 1 - INTERIM LIFE SAFETY MEASURES EVALUATION SHEET; ATTACHMENT 2 - INTERIM LIFE SAFETY MEASURES; ATTACHMENT 3 - DESCRIPTION OF INTERIM LIFE SAFETY MEASURES USED.
- U. Certificates of competencies shall be provided for "all" contractor staff on site prior to staff working on site that indicate staff are competent to perform the work performed.

1.4 OPERATIONS AND STORAGE AREAS

- A. The Contractor shall confine all operations (including storage of materials) on Government premises to areas authorized or approved by the Contracting Officer or COTR. The Contractor shall hold and save the Government, its officers and agents, free and harmless from liability of any nature occasioned by the Contractor's performance.
- B. Temporary buildings (e.g., storage sheds, shops, offices) and utilities may be erected by the Contractor only with the approval of the Contracting Officer and shall be built with labor and materials furnished by the Contractor without expense to the Government. The temporary buildings and utilities shall remain the property of the Contractor and shall be removed by the Contractor at its expense upon completion of the work. With the written consent of the Contracting Officer, the buildings and utilities may be abandoned and need not be removed.
- C. The Contractor shall, under regulations prescribed by the Contracting Officer, use only established roadways, or use temporary roadways constructed by the Contractor when and as authorized by the Contracting Officer. When materials are transported in prosecuting the work, vehicles shall not be loaded beyond the loading capacity recommended by the manufacturer of the vehicle or prescribed by any Federal, State, or local law or regulation. When it is necessary to cross curbs or sidewalks, the Contractor shall protect them from damage. The Contractor

shall repair or pay for the repair of any damaged curbs, sidewalks, or roads.

(FAR 52.236-10)

- D. Working space and space available for storing materials shall be as determined by the COTR.
- E. Workmen are subject to rules of Medical Center applicable to their conduct.
- F. Execute work so as to interfere as little as possible with normal functioning of Medical Center as a whole, including operations of utility services, fire protection systems and any existing equipment, and with work being done by others. Use of equipment and tools that transmit vibrations and noises through the building structure, are not permitted in buildings that are occupied, during construction, jointly by patients or medical personnel, and Contractor's personnel, except as permitted by COTR where required by limited working space.
 - 1. Do not store materials and equipment in other than assigned areas.
 - 2. Schedule delivery of materials and equipment to immediate construction working areas within buildings in use by Department of Veterans Affairs in quantities sufficient for not more than two work days. Provide unobstructed access to Medical Center areas required to remain in operation.
 - 3. Where access by Medical Center personnel to vacated portions of buildings is not required, storage of Contractor's materials and equipment will be permitted subject to fire and safety requirements.
- G. Phasing: To insure such executions, Contractor shall furnish the COTR with a schedule of approximate phasing dates on which the Contractor intends to accomplish work in each specific area of site, building or portion thereof. In addition, Contractor shall notify the COTR two weeks in advance of the proposed date of starting work in each specific area of site, building or portion thereof. Arrange such phasing dates to insure accomplishment of this work in successive phases mutually agreeable to Medical Center Director, COTR and Contractor as follows:
 - Phase I: Install Temporary Construction Controls.
 - Phase II: Complete the construction of the project.
 - Phase III: Remove Temporary Construction Controls.
- H. Construction Controls: Before construction operations begin, Contractor shall provide a barrier wall during demolition, Remove the wall when

directed by COTR, Contractor shall provide access to rooms during demolition and construction/installation.

J. When a construction area is turned over to Contractor, Contractor shall accept entire responsibility therefore.

1. Contractor shall maintain a minimum temperature of 4 degrees C (40 degrees F) at all times, except as otherwise specified.
2. Contractor shall maintain in operating condition existing fire protection and alarm equipment. In connection with fire alarm equipment, Contractor shall make arrangements for pre-inspection of site with Fire Department or Company (Department of Veterans Affairs or municipal) whichever will be required to respond to an alarm from Contractor's employee or watchman.

K. Utilities Services: Maintain existing utility services for Medical Center at all times. Provide temporary facilities, labor, materials, equipment, connections, and utilities to assure uninterrupted services. Where necessary to cut existing water, steam, gases, sewer or air pipes, or conduits, wires, cables, etc. of utility services or of fire protection systems and communications systems (including telephone), they shall be cut and capped at suitable places where shown; or, in absence of such indication, where directed by COTR.

1. No utility service such as water, gas, steam, sewers or electricity, or fire protection systems and communications systems may be interrupted without prior approval of COTR. Electrical work shall be accomplished with all affected circuits or equipment de-energized. When an electrical outage cannot be accomplished, work on any energized circuits or equipment shall not commence without the Medical Center Director's prior knowledge and written approval. Refer to specification Section 16050 for additional requirements.
2. Contractor shall submit a request to interrupt any such services to COTR, in writing, 48 hours in advance of proposed interruption. Request shall state reason, date, exact time of, and approximate duration of such interruption.
3. Contractor will be advised (in writing) of approval of request, or of which other date and/or time such interruption will cause least inconvenience to operations of Medical Center. Interruption time approved by Medical Center may occur at other than Contractor's normal working hours.

4. Major interruptions of any system must be requested, in writing, at least 15 calendar days prior to the desired time and shall be performed as directed by the COTR.
 5. In case of a contract construction emergency, service will be interrupted on approval of COTR. Such approval will be confirmed in writing as soon as practical.
 6. Whenever it is required that a connection fee be paid to a public utility provider for new permanent service to the construction project, for such items as water, sewer, electricity, gas or steam, payment of such fee shall be the responsibility of the Government and not the Contractor.
- L. Abandoned Lines: All service lines such as wires, cables, conduits, ducts, pipes and the like, and their hangers or supports, which are to be abandoned but are not required to be entirely removed, shall be sealed, capped or plugged. The lines shall not be capped in finished areas, but shall be removed and sealed, capped or plugged in ceilings, within furred spaces, in unfinished areas, or within walls or partitions; so that they are completely behind the finished surfaces and removed back to the last point of usable service.
- M. To minimize interference of construction activities with flow of Medical Center traffic, comply with the following:
1. Keep roads, walks and entrances to grounds, to parking and to occupied areas of buildings clear of construction materials, debris and standing construction equipment and vehicles.
 2. Method and scheduling of required cutting, altering and removal of existing roads, walks and entrances must be approved by the COTR.
- N. Coordinate the work for this contract with other construction operations as directed by COTR. This includes the scheduling of traffic and the use of roadways, as specified in Article, USE OF ROADWAYS.
- O. The contractor shall do no work during a two-week period that the COTR shall advise the contractor of during a JCAHO inspection and shall have the entire construction area secured and cleaned prior to the JCAHO inspection.
- P. The contractor is strongly encouraged to send "all" correspondence to all involved staff electronically. The contracting Officer's web address is Danny.Sanders@va.gov. The COTR's web address is James.MacIntyre@va.gov. This includes but is not limited to general correspondence, submittal transmittals, and actual submittal information from manufacturers, requests for payment, progress schedules, daily

logs, payrolls, etc. Realizing that much information comes from sub-contractors, suppliers, distributors, and manufacturers, the prime contractor should thoroughly communicate this request to "all" of these parties as well. The intent is to have the entire contract as possible done electronically.

- Q. "All" construction staff (up to ten (10) individuals for radios) will be required to sign out a portable 2-way radio and an ID badge from the COTR and to sign it back in when their work is done.
- R. No materials or supplies shall be delivered to the employee loading dock. If they get delivered to the dock, they can be sent away with no responsibility to the VA. These shall only be delivered to the contractor's staging area such as a job site trailer. The contractor must be available to accept delivery...VA staff absolutely will not sign for contractor's supplies and materials.
- S. "All" contractor employees and the contractor's staging area must be at the most remote place on the site which is the part of the employees' parking lot that's closest to the boiler plant on one side and 27th Street on the other side for parking and next to the garage area for a staging area. This is because parking is so severely overburdened at the medical center. Trailer shall be kept next to garage area as well. Only one (1) trailer shall be permitted on site during construction and its exact location shall be as approved by the COTR.
- T. Materials shall be delivered in quantities not to exceed that which will be installed in a 2 calendar day period.
- U. Contractor shall hold weekly construction meetings on-site at a location to be determined by the COTR. Contractor shall provide typewritten, or computer generated minutes of all meetings and shall distribute minutes to all participants within two (2) working days after said meeting. Electronic submission of minutes is preferred in lieu of hard copy.

1.5 ALTERATIONS

- A. Survey: Before any work is started, the Contractor shall make a thorough survey with the COTR areas of buildings in which alterations occur and areas which are anticipated routes of access, and furnish a report, signed by both, to the Contracting Officer. This report shall list by rooms and spaces:
 - 1. Existing condition and types of resilient flooring, doors, windows, walls and other surfaces not required to be altered throughout affected areas of buildings.

2. Existence and conditions of items such as plumbing fixtures and accessories, electrical fixtures, equipment, blinds, shades, etc., whether or not they are required by drawings to be either reused or relocated, or both.
 3. Shall note any discrepancies between drawings and existing conditions at site.
 4. Shall designate areas for working space, materials storage and routes of access to areas within buildings where alterations occur and which have been agreed upon by Contractor and COTR.
- B. Any items required by drawings to be either reused or relocated or both, found during this survey to be nonexistent, or in opinion of COTR, to be in such condition that their use is impossible or impractical, shall be furnished and/or replaced by Contractor with new items in accordance with specifications, which will be furnished by Government. Provided the contract work is changed by reason of this subparagraph B, the contract will be modified accordingly, under provisions of clause entitled "DIFFERING SITE CONDITIONS" (FAR 52.236-2) and "CHANGES" (FAR 52.243-4 and VAAR 852.236-88) of Section 01001, GENERAL CONDITIONS.
- C. Re-Survey: Thirty days before expected partial or final inspection date, the Contractor and COTR together shall make a thorough re-survey of the areas of buildings involved. They shall furnish a report on conditions then existing, of resilient flooring, doors, windows, walls and other surfaces as compared with conditions of same as noted in first condition survey report.
1. Re-survey report shall also list any damage caused by Contractor to such flooring and other surfaces, despite protection measures; and, will form basis for determining extent of repair work required of Contractor to restore damage caused by Contractor's workmen in executing work of this contract.
- D. Protection: Provide the following protective measures:
1. Wherever existing roof surfaces are disturbed they shall be protected against water infiltration. In case of leaks, they shall be repaired immediately upon discovery.
 2. Temporary protection against damage for portions of existing structures and grounds where work is to be done, materials handled and equipment moved and/or relocated.
 3. Protection of interior of existing structures at all times, from damage, dust and weather inclemency. Wherever work is performed, floor surfaces that are to remain in place shall be adequately

protected prior to starting work, and this protection shall be maintained intact until all work in the area is completed.

1.6 INFECTION PREVENTION MEASURES

- A. Implement the requirements of VAMC's Infection Control Risk Assessment (ICRA) team. ICRA Group may monitor dust in the vicinity of the construction work and require the Contractor to take corrective action immediately if the safe levels are exceeded.
- B. Establish and maintain a dust control program as part of the contractor's infection preventive measures in accordance with the guidelines provided by ICRA Group. Prior to start of work, prepare a plan detailing project-specific dust protection measures, including periodic status reports, and submit to COTR and Facility ICRA team for review for compliance with contract requirements in accordance with Section 01 33 23, SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES.
 - 1. All personnel involved in the construction or renovation activity shall be educated and trained in infection prevention measures established by the medical center.
- C. Medical center Infection Control personnel shall monitor for airborne disease (e.g. aspergillosis) as appropriate during construction. A baseline of conditions may be established by the medical center prior to the start of work and periodically during the construction stage to determine impact of construction activities on indoor air quality. In addition:
 - 1. The COTR and VAMC Infection Control personnel shall review pressure differential monitoring documentation provided by the contractor to verify that pressure differentials in the construction zone and in the patient-care rooms are appropriate for their settings. The requirement for negative air pressure in the construction zone shall depend on the location and type of activity. Upon notification, the contractor shall implement corrective measures to restore proper pressure differentials as needed.
 - 2. In case of any problem, the contractor shall conduct an environmental assessment to find and eliminate the source.
- C. In general, following preventive measures shall be adopted during construction to keep down dust and prevent mold.
 - 1. Dampen debris to keep down dust and provide temporary construction partitions in existing structures where directed by COTR. Blank off ducts and diffusers to prevent circulation of dust into occupied areas during construction.

2. Do not perform dust producing tasks within occupied areas without the approval of the COTR. For construction in any areas that will remain jointly occupied by the medical Center and Contractor's workers, the Contractor shall:
- a. Provide dust proof, and/or appropriate fire-rated, temporary drywall construction barriers (Whether or not the barrier requires a fire rating, and if so, what type of rating, depends on the area, nature of work, and NFPA. Dust Free, Appropriate Fire, and Smoke barrier integrity needs to be maintained at all times.) to completely separate construction from the operational areas of the hospital in order to contain dirt debris and dust, and fire and smoke when necessary. Barriers shall be sealed and made presentable on hospital occupied side. Install a self-closing rated door in a metal frame, commensurate with the partition, to allow worker access. Maintain negative air at all times. A fire retardant polystyrene, 6-mil thick or greater plastic barrier meeting local fire codes may be used where dust control is the only hazard, and an agreement is reached with the COTR and Medical Center.
 - b. HEPA filtration is required where the exhaust dust may reenter the breathing zone. Contractor shall verify that construction exhaust to exterior is not reintroduced to the medical center through intake vents, or building openings. Install HEPA (High Efficiency Particulate Accumulator) filter vacuum system rated at 95% capture of 0.3 microns including pollen, mold spores and dust particles. Insure continuous negative air pressures occurring within the work area. HEPA filters should have ASHRAE 85 or other pre-filter to extend the useful life of the HEPA. Provide both primary and secondary filtrations units. Exhaust hoses shall be heavy duty, flexible steel reinforced and exhausted so that dust is not reintroduced to the medical center.
 - c. Adhesive Walk-off/Carpet Walk-off Mats, minimum 24" x 36", shall be used at all interior transitions from the construction area to occupied medical center area. These mats shall be changed as often as required to maintain clean work areas directly outside construction area at all times.
 - d. Vacuum and wet mop all transition areas from construction to the occupied medical center at the end of each workday. Vacuum shall utilize HEPA filtration. Maintain surrounding area frequently.

Remove debris as they are created. Transport these outside the construction area in containers with tightly fitting lids.

- e. The contractor shall not haul debris through patient-care areas without prior approval of the COTR and the Medical Center. When, approved, debris shall be hauled in enclosed dust proof containers or wrapped in plastic and sealed with duct tape. No sharp objects should be allowed to cut through the plastic. Wipe down the exterior of the containers with a damp rag to remove dust. All equipment, tools, material, etc. transported through occupied areas shall be made free from dust and moisture by vacuuming and wipe down.
- f. Using a HEPA vacuum, clean inside the barrier and vacuum ceiling tile prior to replacement. Any ceiling access panels opened for investigation beyond sealed areas shall be sealed immediately when unattended.
- g. There shall be no standing water during construction. This includes water in equipment drip pans and open containers within the construction areas. All accidental spills must be cleaned up and dried within 12 hours. Remove and dispose of porous materials that remain damp for more than 72 hours.
- h. At completion, remove construction barriers and ceiling protection carefully, outside of normal work hours. Vacuum and clean all surfaces free of dust after the removal.

D. Final Cleanup:

- 1. Upon completion of project, or as work progresses, remove all construction debris from above ceiling, vertical shafts and utility chases that have been part of the construction.
- 2. Perform HEPA vacuum cleaning of all surfaces in the construction area. This includes walls, ceilings, cabinets, furniture (built-in or free standing), partitions, flooring, etc.
- 3. All new air ducts shall be cleaned prior to final inspection.

1.7 DISPOSAL AND RETENTION

A. Materials and equipment accruing from work removed and from demolition of buildings or structures, or parts thereof, shall be disposed of as follows:

- 1. Reserved items which are to remain property of the Government are noted on drawings or in specifications as items to be stored. Items which remain property of the Government shall be removed or dislodged from present locations in such a manner as to prevent damage which

- would be detrimental to re-installation and reuse. Store such items where directed by COTR.
2. Items not reserved shall become property of the Contractor and be removed by Contractor from Medical Center. All demolished metal to be recycled with manifest and reports supplied to the VA.
 3. Items of portable equipment and furnishings located in rooms and spaces in which work is to be done under this contract shall remain the property of the Government. When rooms and spaces are vacated by the Department of Veterans Affairs during the alteration period, such items which are NOT required by drawings and specifications to be either relocated or reused will be removed by the Government in advance of work to avoid interfering with Contractor's operation.
 4. All dumpsters used by the contractor are required to be covered by an approved method when not actively being used.

1.8 PROTECTION OF EXISTING VEGETATION, STRUCTURES, EQUIPMENT, UTILITIES, AND IMPROVEMENTS

- A. The Contractor shall preserve and protect all structures, equipment, and vegetation (such as trees, shrubs, and grass) on or adjacent to the work site, which is not to be removed and which does not unreasonably interfere with the work required under this contract. The Contractor shall only remove trees when specifically authorized to do so, and shall avoid damaging vegetation that will remain in place. If any limbs or branches of trees are broken during contract performance, or by the careless operation of equipment, or by workmen, the Contractor shall trim those limbs or branches with a clean cut and paint the cut with a tree-pruning compound as directed by the Contracting Officer.
- B. The Contractor shall protect from damage all existing improvements and utilities at or near the work site and on adjacent property of a third party, the locations of which are made known to or should be known by the Contractor. The Contractor shall repair any damage to those facilities, including those that are the property of a third party, resulting from failure to comply with the requirements of this contract or failure to exercise reasonable care in performing the work. If the Contractor fails or refuses to repair the damage promptly, the Contracting Officer may have the necessary work performed and charge the cost to the Contractor.

(FAR 52.236-9)

1.9 RESTORATION

- A. Remove, cut, alter, replace, patch and repair existing work as necessary to install new work. Except as otherwise shown or specified, do not cut, alter or remove any structural work, and do not disturb any ducts, plumbing, steam, gas, or electric work without approval of the COTR. Existing work to be altered or extended and that is found to be defective in any way, shall be reported to the COTR before it is disturbed. Materials and workmanship used in restoring work shall conform in type and quality to that of original existing construction, except as otherwise shown or specified.
- B. Upon completion of contract, deliver work complete and undamaged. Existing work (walls, ceilings, partitions, floors, mechanical and electrical work, lawns, paving, roads, walks, etc.) disturbed or removed as a result of performing required new work, shall be patched, repaired, reinstalled, or replaced with new work, and refinished and left in as good condition as existed before commencing work.
- C. At Contractor's own expense, Contractor shall immediately restore to service and repair any damage caused by Contractor's workmen to existing piping and conduits, wires, cables, etc., of utility services or of fire protection systems and communications systems (including telephone) which are indicated on drawings and which are not scheduled for discontinuance or abandonment.
- D. Expense of repairs to such utilities and systems not shown on drawings or locations of which are unknown will be covered by adjustment to contract time and price in accordance with clause entitled "CHANGES" (FAR 52.243-4 and VAAR 852.236-88) and "DIFFERING SITE CONDITIONS" (FAR 52.236-2) of Section 01001, GENERAL CONDITIONS.

1.10 AS-BUILT DRAWINGS

- A. The contractor shall maintain two full size sets of as-built drawings, which will be kept current during construction of the project, to include all contract changes, modifications and clarifications.
- B. All variations shall be shown in the same general detail as used in the contract drawings. To insure compliance, as-built drawings shall be made available for the COTR's review, as often as requested.
- C. Contractor shall deliver two approved completed sets of as-built drawings to the COTR 21 days prior to the final inspection and the acceptance of the project by the COTR.
- D. Paragraphs A, B, & C shall also apply to all shop drawings.

1.11 USE OF ROADWAYS

- A. For hauling, use only established public roads and roads on Medical Center property and, when authorized by the COTR, such temporary roads which are necessary in the performance of contract work. Temporary roads shall be constructed by the Contractor at Contractor's expense. When necessary to cross curbing, sidewalks, or similar construction, they must be protected by well-constructed bridges.

1.12 TEMPORARY USE OF MECHANICAL AND ELECTRICAL EQUIPMENT

- A. Use of new installed mechanical and electrical equipment to provide heat, ventilation, plumbing, light and power will be permitted subject to compliance with the following provisions:
1. Permission to use each unit or system must be given by COTR. If the equipment is not installed and maintained in accordance with the following provisions, the COTR will withdraw permission for use of the equipment.
 2. Electrical installations used by the equipment shall be completed in accordance with the drawings and specifications to prevent damage to the equipment and the electrical systems, i.e. transformers, relays, circuit breakers, fuses, conductors, motor controllers and their overload elements shall be properly sized, coordinated and adjusted. Voltage supplied to each item of equipment shall be verified to be correct and it shall be determined that motors are not overloaded. The electrical equipment shall be thoroughly cleaned before using it and again immediately before final inspection including vacuum cleaning and wiping clean interior and exterior surfaces.
 3. Units shall be properly lubricated, balanced, and aligned. Vibrations must be eliminated.
 4. Automatic temperature control systems for preheat coils shall function properly and all safety controls shall function to prevent coil freeze-up damage.
 5. The air filtering system utilized shall be that which is designed for the system when complete, and all filter elements shall be replaced at completion of construction and prior to testing and balancing of system.
 6. All components of heat production and distribution system, metering equipment, condensate returns, and other auxiliary facilities used in temporary service shall be cleaned prior to use; maintained to prevent corrosion internally and externally during use; and cleaned, maintained and inspected prior to acceptance by the Government.

- B. Prior to final inspection, the equipment or parts used which show wear and tear beyond normal, shall be replaced with identical replacements, at no additional cost to the Government.
- C. This paragraph shall not reduce the requirements of the mechanical and electrical specifications sections.

1.13 TEMPORARY USE OF EXISTING ELEVATORS

- A. Use of existing freight elevator for handling building materials and Contractor's personnel will be permitted subject to following provisions:
 - 1. Contractor makes all arrangements with the COTR for use of elevators. The COTR will ascertain that elevators are in proper condition. Contractor may use freight elevator for daily use between the hours of 8:00am and 4:30pm and for special nonrecurring time intervals when permission is personnel for operating elevators will not be provided by the Department of Veterans Affairs.
 - 2. Contractor covers and provides maximum protection of following elevator components:
 - a. Entrance jambs, heads soffits and threshold plates.
 - b. Entrance columns, canopy, return panels and inside surfaces of car enclosure walls.
 - c. Finish flooring.
 - 3. Government will accept hoisting ropes of elevator and rope of each speed governor if they are worn under normal operation. However, if these ropes are damaged by action of foreign matter such as sand, lime, grit, stones, etc., during temporary use, they shall be removed and replaced by new hoisting ropes.
 - 4. If brake lining of elevators are excessively worn or damaged during temporary use, they shall be removed and replaced by new brake lining.
 - 5. All parts of main controller, starter, relay panel, selector, etc., worn or damaged during temporary use shall be removed and replaced with new parts, if recommended by elevator inspector after elevator is released by Contractor.
 - 6. Place elevator in condition equal, less normal wear, to that existing at time it was placed in service of Contractor as approved by Contracting Officer.

1.14 TEMPORARY TOILETS

- A. Contractor may have for use of Contractor's workmen, such toilet accommodations as may be assigned to Contractor by Medical Center.

Contractor shall keep such places clean and be responsible for any damage done thereto by Contractor's workmen. Failure to maintain satisfactory condition in toilets will deprive Contractor of the privilege to use such toilets.

1.15 AVAILABILITY AND USE OF UTILITY SERVICES

- A. The Government shall make all reasonably required amounts of utilities available to the Contractor from existing outlets and supplies, as specified in the contract. The amount to be paid by the Contractor for chargeable electrical services shall be the prevailing rates charged to the Government. The Contractor shall carefully conserve any utilities furnished without charge.
- B. The Contractor, at Contractor's expense and in a workmanlike manner satisfactory to the Contracting Officer, shall install and maintain all necessary temporary connections and distribution lines, and all meters required to measure the amount of electricity used for the purpose of determining charges. Before final acceptance of the work by the Government, the Contractor shall remove all the temporary connections, distribution lines, meters, and associated paraphernalia.
- C. Heat: Furnish temporary heat necessary to prevent injury to work and materials through dampness and cold. Use of open salamanders or any temporary heating devices which may be fire hazards or may smoke and damage finished work, will not be permitted. Maintain minimum temperatures as specified for various materials.
 - 1. Obtain heat by connecting to Medical Center heating distribution system.
 - a. Steam is available at no cost to Contractor.
- D. Electricity (for Construction and Testing): Furnish all temporary electric services.
 - 1. Obtain electricity by connecting to the Medical Center electrical distribution system. The Contractor shall meter and pay for electricity required for electric cranes and hoisting devices, electrical welding devices and any electrical heating devices providing temporary heat. Electricity for all other uses is available at no cost to the Contractor.
- E. Water (for Construction and Testing): Furnish temporary water service.
 - 1. Obtain water by connecting to the Medical Center water distribution system. Provide reduced pressure backflow preventer at each connection. Water is available at no cost to the Contractor.

2. Maintain connections, pipe, fittings and fixtures and conserve water-use so none is wasted. Failure to stop leakage or other wastes will be cause for revocation (at COTR's discretion) of use of water from Medical Center's system.

1.16 RELOCATED EQUIPMENT AND ITEMS

- A. Contractor shall disconnect, dismantle as necessary, remove and reinstall in new location, all existing equipment and items indicated by symbol "R" or otherwise shown to be relocated by the Contractor.
- B. Perform relocation of such equipment or items at such times and in such a manner as directed by the COTR.
- C. Suitably cap existing service lines, such as steam, condensate return, water, drain, gas, air, vacuum and/or electrical, whenever such lines are disconnected from equipment to be relocated. Remove abandoned lines back to last point of use in finished areas and cap as specified herein before under paragraph "Abandoned Lines".
- D. Provide all mechanical and electrical service connections, fittings, fastenings and any other materials necessary for assembly and installation of relocated equipment; and leave such equipment in proper operating condition.
- E. All service lines such as noted above for relocated equipment shall be in place at point of relocation ready for use before any existing equipment is disconnected. Make relocated existing equipment ready for operation or use immediately after reinstallation.

1.17 HISTORIC PRESERVATION

Where the Contractor or any of the Contractor's employees, prior to, or during the construction work, are advised of or discover any possible archeological, historical and/or cultural resources, the Contractor shall immediately notify the COTR verbally, and then with a written follow up.

INTERIM LIFE SAFETY MEASURES

1. **PURPOSE.** To identify the need for, and to institute interim life safety measures (ILSM) to temporarily compensate for the hazard posed by life safety deficiencies due to construction.

2. **POLICY.** When requirements for fire protection and/or environment and grounds safety are affected by construction, Facilities Department will institute and document interim life safety measures. The interim measures are to be continued and documented so that the level of safety is not diminished in any occupied area, and a safe environment is maintained throughout construction of and/or alteration to buildings and/or grounds. For each project, effective ILSMs will be implemented and continually assessed for appropriateness based on the hazards present.

3. **RESPONSIBILITIES.**

a. **Contracting Officer's Technical Representative (COTR) and Contractor.** The assigned COTR will be responsible for including a copy of this memorandum in specifications for construction projects. The Contractor will then be responsible for evaluating the project concerning interim life safety measures. If measures are found to be applicable to the project, the Contractor will develop procedures for enforcement and document compliance with the measure.

b. **Safety Manager.** Responsible for reviewing the interim life safety measures evaluation sheet for approval.

c. **Manager, Facilities Department.** Responsible for reviewing the interim life safety measures evaluation sheet for approval and for ensuring the implementation, enforcement, and documentation of the interim life safety measures.

4. **PROCEDURES.**

a. Prior to the start of any construction project, the responsible Contractor will evaluate the need for interim life safety measures.

b. The responsible Contractor will complete an Interim Life Safety Measures Evaluation Packet and submit it to the COTR, the Safety Manager and the Manager, Facilities Department for approval. The packet includes:

i. (1) Attachment 1 - An evaluation sheet. A list of questions to assist in determining whether interim life safety measures are necessary.

ii. (2) Attachment 2 - An interim life safety measures matrix to assist in answering the questions in Attachment 1.

iii. (3) Attachment 3 - A page where the responsible Contractor documents which

interim life safety measures / procedures will be incorporated as part of the project. This form will be signed by the Contractor, COTR, the Safety Manager, and the Manager, Facilities Department.

c. To complete the packet:

iv. (1) The questions on Attachment 1 and the columns on Attachment 2 correlate. Examine the questions in Attachment 1 and find the corresponding column on Attachment 2. Any deficiencies identified on Attachment 2 will be considered in completing the questions on Attachment 1.

v. (2) If, according to a column on Attachment 2, the project does not create the specific deficiency, the question on Attachment 1 will state that the ILSM was evaluated, but no action was deemed necessary.

vi. (3) Then, using the information from Attachments 1 and 2, complete Attachment 3 by listing all of the ILSMs which will be instituted during the course of the project. Attachment 3 will then be signed by the Contractor, COTR, the Safety Manager, and the Manager, Facilities Department.

d. Once necessary ILSMs are implemented, inspect the project daily and record findings in the daily log. Any identified problems with the implemented ILSMs will be abated as soon as possible.

e. All necessary documentation will be maintained in the project files to reflect compliance with this procedure.

f. The project will be continually evaluated for ILSM needs throughout the project as conditions change which may compromise life safety protection elements of the hospital.

5. **REFERENCES.** 1997 Accreditation Manual for Hospitals, JCAHO.

6. **RECESSION.** None.

Jeffery L. Thompson
Manager, Facilities Department

Attachment No. 1

Interim Life Safety Measures Evaluation Sheet

Date: _____**Project Title:** _____ **Project No.** _____

The following Interim Life Safety Measures will be evaluated individually and initiated as needed to compensate for the temporary hazards imposed during construction:

1. Ensure exits provide an unobstructed egress. Personnel receive additional training if alternate exits must be designated. Buildings or areas under construction must maintain escape routes for construction workers at all times. See Column A, Attachment 2.

Exits Obstructed? YES NO If Yes, then:

- a. The Contractor will coordinate and document that appropriate facility personnel receive training on alternate routes and exits.

Training Conducted? YES NO Date: _____

- b. Construction areas will have designated and marked exits. Areas will be inspected daily to ensure exits are kept clear.

2. Ensure free and unobstructed access to emergency services and for fire, police and other emergency forces (i.e., Local Fire Department). See Column B, Attachment 2.

- a. The construction plans will be reviewed to ensure proper access will be maintained.

Plans reviewed? YES NO Date: _____

- b. Areas will be inspected daily and results will be recorded.

- c. Emergency forces notified about the construction? See Column C, Attachment 2.

VA Police notified? YES NO Date: _____

Local Fire
Department notified? YES NO Date: _____

3. Ensures fire alarm, detection, and suppression systems are in good working order. A temporary but equivalent system will be provided when any fire system is impaired. Temporary systems must be inspected and tested monthly and results will be recorded. See Column D, Attachment 2.

- a. Contractor will schedule work to minimize the time systems are impaired and the Contractor will insure shutdown of the Life Safety Systems.

Shutdown

Procedure followed? YES NO Date: _____

4. Ensure temporary construction partitions are smoke tight and built of noncombustible or limited combustible materials that will not contribute to the development or spread of fire. See Column E, Attachment 2.

- a. Areas will be inspected daily and deficiencies will be recorded.

5. Coordinate providing additional fire-fighting equipment and training of appropriate personnel in its use. Evaluate the impact to emergency response teams and provide notification, if necessary (i.e., Code Red Team, Police and Security, Fire Department). See Column F and G, Attachment 2.

a. Provided? YES NO Date: _____

b. Training Conducted? YES NO Date: _____

c. VA Police Notified? YES NO Date: _____

d. Altoona Fire
Department Notified? YES NO Date: _____

e. Code Teams Notified? YES NO Date: _____

- f. Contractor will be briefed at pre-construction conference of need to provide adequate fire fighting equipment and training to construction employees.

Brief Conducted? YES NO Date: _____

6. Smoking is prohibited in the hospital. Within other construction areas outside the hospital, smoking is only allowed in approved designated areas. See Column H, Attachment 2.

7. Developing and enforcing storage, housekeeping, and debris removal, practices that reduce the flammable and combustible fire load of the building to the lowest feasible level. See Column I, Attachment 2.

- a. Areas will be inspected daily and the results will be recorded.

8. Conduct a minimum of two fire drills per shift per quarter. Although the Contractor will inform the COTR and the Safety Manager of the need to conduct more fire drills, the Safety

Manager will assume responsibility for completing the required number of drills. See Column J, Attachment 2.

Additional Drills
Required? YES NO Date: _____

9. Increase hazard surveillance of buildings, grounds, and equipment with special attention to excavations, construction areas, construction storage and field offices See Column K, Attachment 2.

- a. Areas will be inspected daily and results will be recorded in the daily log.
 - 1. Means of egress is clear in construction areas.
 - 2. Access for fire department and emergency services is clear. Every building and area will remain accessible to fire department apparatus and personnel. Roadways will be maintained within 20 feet of all buildings.
 - 3. Note the status of the fire detection / sprinkler system.
 - 4. Construction partitions are being maintained.
 - 5. Good housekeeping practices are being used in construction areas. Flammable and combustible fire load is being kept to a minimum.
 - 6. Buildings, grounds, and equipment are being maintained in a safe manner (pay special attention to excavations, construction areas, construction storage, and field offices).
 - 7. Smoking regulations are being followed.
- b. List on Attachment 3 descriptions of the interim life safety measures that will be used during the project as determined by Attachments 1 and 2.

10. Coordinating and documenting that affected personnel have been trained to compensate for impaired structural and compartmentalization features of fire safety. See Column L, Attachment 2.

Training Conducted? YES NO Date: _____

11. Coordinating with the Safety Manager to conduct organization-wide safety education programs to ensure awareness of any Life Safety Code deficiencies, construction hazards, and ILSM. See Column M, Attachment 2.

Information Provided? YES NO Date: _____

Attachment 2 **Interim Life Safety Measures**

		A	B	C	D	E	F	G	H	I	J	K	L	M
Existing Significant Life Safety Code Deficiencies or Conditions as a Result of Construction		Ensuring Egress	Emergency Forces Access	Emergency Forces Notification	Ensuring Operational Life Safety Systems	Temporary Construction Barriers	Additional Fire Fighting Equipment	Conducting Additional Training of Incident Response Team	Prohibiting Smoking	Controlling Combustible Loading	Conducting 2 Fire Drills Per Shift in all Areas	Increased Hazard Surveillance	Compartment Training of Personnel	Conducting Organizational Training on Life Safety

JAMES E. VAN ZANDT VA MEDICAL CENTER
ALTOONA, PENNSYLVANIA

MEDICAL CENTER MEMORANDUM 13-14
SEPTEMBER 2002

**INFECTION CONTROL AND SAFETY/HEALTH GUIDELINES FOR
CONSTRUCTION AND RENOVATION**

1. **PURPOSE:** To prevent the acquisition of nosocomial infections in patients and to decrease the risk of exposure of employees, visitors, and contractors, to potential infections, safety and other health hazards during renovation or construction activities at the VA Medical Center, Altoona, and Community Based Outpatient Clinics (CBOCs).

2. **POLICY:** All renovation or construction projects will be reviewed with Infection Control and the Safety Office during the planning phases.

a. Infection Control Nurse and the Safety Manager will participate in meetings and area walk-through inspections as necessary. All walk-through of the construction area must be coordinated with the Facility Management Project Section.

b. All construction workers, including subcontractors, and Facilities Management employees, must follow the infection control procedures as described in this guideline.

3. **RESPONSIBILITIES:**

a. **Director** will assure that all project coordinators, engineers, and Facilities Manager apprise the Infection Control Nurse, Patient Privacy Coordinator, and the Safety Manager of plans for all projects involving construction and/or renovation of clinical and non-clinical areas in the medical center.

b. **Facilities Manager** or designee will notify the Infection Control Nurse, Patient Privacy Coordinator, and Safety Manager, in writing, of pertinent planning meetings related to construction and renovation projects.

c. **Infection Control Nurse** will respond to requests and provide infection prevention and control related recommendations for project development and maintenance of areas during construction and renovation projects.

d. **Safety Manager** will respond to requests and provide safety and health related recommendations for project development and maintenance of areas during construction and renovation projects.

e. **Patient Privacy Coordinator** will respond to requests and provide recommendations for project development and maintenance of areas during construction and renovation.

4. PROCEDURES:

a. Design Phase

(1) Infection Control Nurse and the Safety Manager will participate in project kick-off meeting.

(2) Infection Control Nurse will be involved in the design phases for all renovation and new construction projects specific to the following major components (design):

- (a) Number and placement of isolation rooms
- (b) Air handling systems; use of adjunctive measures such as ultraviolet germicidal irradiation (UVGI) and appropriate filtration systems
- (c) Number and placement of hand washing facilities
- (d) Staff and patient traffic patterns for the duration of the project
- (e) Relocation decisions regarding patient care areas, storage areas, etc.
- (f) Water supply and plumbing
- (g) Construction waste containment, transport and disposal
- (h) Selection and installation of medical equipment as it relates to infection control
- (i) Selection of finishes and surfaces that can be effectively cleaned

(3) The Safety Manager will be involved in the planning phases for **all** renovation and new construction projects specific to the following major components (design):

- (a) Number and placement of eye-wash, shower, hazardous chemical or compressed gas facilities
- (b) Staff and patient traffic patterns for the duration of the project
- (c) Relocation decisions regarding patient care areas, storage areas, etc.
- (d) Water supply and plumbing
- (e) Construction waste containment, transport and disposal
- (f) Selection of finishes and surfaces that can be effectively cleaned

(4) The Patient Privacy Coordinator will be involved in the design phases for all renovation and new construction projects as applicable.

(5) An *Infection Control Risk Assessment* will be conducted by the Safety Manager, Infection Control Nurse, Project COTR, Facilities Manager, stakeholder(s), and others as deemed necessary (Patient Privacy Coordinator, HVAC technicians, pipefitter, etc.) in accordance with **Attachment A**, when the architectural floor plan is complete.

(6) At the completion of the Design Development Phase (50%), an *Infection Control Construction Permit (Attachment B)* will be completed by the Facilities Manager or designee and placed in the contract file. Construction drawings and specifications will be adjusted accordingly in the Construction Documents Phase.

b. Operational Phase**(1) Medical Waste**

(a) Environmental Management staff shall remove any medical waste, including sharps containers, from areas to be renovated or constructed BEFORE the start of the project.

(b) Infection Control shall be notified immediately if unexpected medical waste is encountered.

(c) Environmental Management staff will do appropriate cleaning of all areas prior to the start of the project and at the completion of the project.

(2) Barrier Walls: Construction or renovation sites must be separated from patient-care areas and critical areas such as SPD and Pharmacy by barriers that keep the dirt and dust inside the worksite.

(a) The integrity of the barrier walls must assure a complete seal of the construction area from adjacent areas.

(b) Rigid construction or plastic sheeting (4 or 6 mil thickness) are used, depending on the location of the project, adjacent uses, and duration of the project.

(c) Walls will be dustproof with seals maintained at the full perimeter of the walls, which allow for minimization of dust collection and spread.

(3) Environmental Control

(a) At the discretion of the Engineering staff, Construction site manager, and Infection Control Risk Assessment: Constant negative pressure within the zone must be maintained and monitored by construction personnel. Exhaust from construction air should be directed outside with no recirculation if possible. If the exhaust must tie into a recirculated air system, a pre-filter and high efficiency filter (95%) should be used before exhaust to prevent contamination of the ducts. Fans should be turned off before opening ductwork and necessary interruptions should be planned for to minimize risk.

(b) Demolition debris will be disposed of into non-infectious waste trash bins and removed from the construction area daily, using specified traffic patterns. Construction waste will be contained in tightly covered containers before transport as needed. Transport receptacles or carts will be covered and the covering taped unless a solid lid. Construction materials are not to be disposed of in medical center waste containers.

(c) "Sticky" or walk-off mats shall be utilized immediately outside the construction zone and elevators to remove dust and soil from shoes, cart wheels, etc. as personnel exit

the area. The "sticky" mat must be large enough to cover the entire exit and is changed whenever necessary.

(d) Windows will remain closed as much as feasible during the construction/renovation process.

(e) When using demolition chutes, chute opening must be closed when not in use. The chute and damper should be sprayed with water, as necessary, to maintain dust control.

(f) Control, collection, and disposal must be provided for any drain liquid or sludge encountered when demolishing plumbing.

(4) Traffic Control

(a) Designated entry and exit procedures will be defined (in conjunction with any necessary Interim Life Safety Measures) for each construction project where applicable.

(b) All egress pathways will be free of debris.

(c) Unauthorized personnel will not be allowed to enter the construction zone.

(d) Only designated elevators will be used for construction activities during scheduled times.

(e) Construction areas will be fitted with lockable doors and will remain locked when not occupied by construction crew when drywall barriers are used.

(5) Cleaning

(a) The construction zone and adjacent entry areas shall be maintained in a clean and sanitary manner by the contractors and will be swept and wet mopped daily or more frequently as needed to minimize dust generation.

(b) Environmental Management staff will be responsible for the routine cleaning of adjacent areas including stairwells and for the final cleaning of the construction zone prior to the opening of the newly renovated or constructed area. Specific responsibility will be defined in the construction contracts.

(6) Personnel Requirements

(a) Clothing shall be free of loose soil and debris upon exiting the construction zone.

(b) Personnel entering sterile/invasive procedure areas will be provided with a disposable jump suit, head covering and shoe coverings, which must be removed prior to exiting the work area.

(1) Tools and equipment must be damp-wiped prior to entry and exit from sterile and invasive procedure areas.

(2) Tools and equipment soiled with blood and body fluids will be cleaned with a VA-approved germicide.

(c) Facilities Management employees shall receive Infection Control and Safety and Health training as it relates to construction. (See ***Attachment C***)

(7) Environmental Monitoring

(a) Infection Control, in conjunction with Facilities Management and Safety, will plan for environmental monitoring as appropriate for the project.

c. Completion Phase

(1) After completion of construction, ventilation will meet specifications as mandated by regulatory bodies.

(2) The area will be thoroughly cleaned and disinfected by in-house staff before being placed into service.

(3) Safety Manager, Infection Control Nurse, and Patient Privacy Coordinator will be invited to the final inspection.

d. Compliance Monitoring

Medical center staff (Project Engineer, Safety Manager (incl. Industrial Hygiene), Infection Control) and the contractor (or designee) will conduct compliance monitoring as necessary. The following parameters will be monitored:

- (1) Air quality
- (2) Integrity of barrier walls
- (3) Personnel requirements
- (4) Infection control
- (5) Noise
- (6) Traffic control
- (7) Vibration
- (8) Utility Management

ATTACHMENT "A"

Infection Control Risk Assessment
Matrix of Precautions for Construction & Renovation**Step 1: Using the following table, identify the type of Construction Project Activity (A-D)**

Type A	Inspection and Non-Invasive Activities Includes, but is not limited to: <ul style="list-style-type: none"> • Removal of ceiling tiles for visual inspection limited to 1 tile per 50 square feet. • Painting (but not sanding) • Wallcovering, electrical trim work, minor plumbing, and activities which do not generate dust or require cutting of walls or access to ceilings other than for visual inspection.
Type B	Small scale, short duration activities which create minimal dust Includes, but is not limited to: <ul style="list-style-type: none"> • Installation of telephone and computer cabling • Access to chase spaces • Cutting of walls or ceiling where dust migration can be controlled
Type C	Work that generates a moderate to high level of dust or requires demolition or removal of any fixed building components or assemblies Includes, but is not limited to: <ul style="list-style-type: none"> • Sanding of walls for painting or wall covering • Removal of floor coverings, ceiling tiles and casework • New wall construction • Minor duct work or electrical work above ceilings • Major cabling activities • Any activity which cannot be completed within a single work shift
Type D	Major demolition and construction projects Includes, but is not limited to: <ul style="list-style-type: none"> • Activities which require consecutive work shifts • Requires heavy demolition or removal of a complete cabling system • New construction

Step 2: Using the following table, identify the Patient Risk Groups that will be affected. If more than one risk group will be affected, select the higher risk group:

Low Risk	Medium Risk	High Risk	Highest Risk
<ul style="list-style-type: none"> • Office areas • Chapel • Engineering • Lobbies • Public Corridors • Warehouse 	<ul style="list-style-type: none"> • Cardiology • Physical Therapy • Radiology/MRI • Respirator Therapy • Radiology • Respiratory Therapy • Pharmacy • Amb. Care Clinics • Unit 4 • Unit 5 • Unit 6 	<ul style="list-style-type: none"> • Intensive Care (ICU) • Emergency Room • Laboratories (specimen) • Outpatient Surgery • Post-Anesthesia Care Unit • Pharmacy Admixture 	<ul style="list-style-type: none"> • Any area caring for immune compromised patients • Central Sterile Supply • Negative pressure isolation rooms • Operating rooms

	<ul style="list-style-type: none">• Canteen• Food Service Kitchen		
--	--	--	--

Step 3:

Match the Patient Risk Group (low, medium, high, highest) with the planned **Construction Project Type** (A, B, C, D) on the IC Matrix to find the **Class of Precautions** (I, II, III, IV) or level of infection control activities required. Classes of precautions are described in the table on the next page.

IC Matrix: Class of Precautions for Construction Projects by Patient Risk

Patient Risk Group	Type A	Type B	Type C	Type D
LOW Risk Group	I	II	II	III/IV
MEDIUM Risk Group	I	II	III	IV
HIGH Risk Group	I	II	III/IV	IV
HIGHEST Risk Group	II	III/IV	III/IV	IV

Note: Infection Control approval will be required when the Construction Activity and Risk Level indicates that **Class III** or **Class IV** control procedures are necessary.

Description of Required Infection Control Precautions by Class

Note: Specific items within each Class will be selected by the Risk Assessment Team.

During Construction Project		Upon Completion of Project
Class I	<ol style="list-style-type: none"> 1. Execute work by methods to minimize raising dust from construction operations. 2. Immediately replace a ceiling tile displaced for visual inspection. 	
Class II	<ol style="list-style-type: none"> 1. Provide active means to prevent airborne dust from dispersing into atmosphere. 2. Water mist work surfaces to control dust while cutting. 3. Seal unused doors with duct tape. 4. Block off and seal air vents. 5. Place dust mat at entrance and exit of work area. 6. Remove or isolate HVAC system in areas where work is being performed. 	<ol style="list-style-type: none"> 1. Wipe work surfaces with disinfectant (in-house staff) 2. Contain construction waste before transport in tightly covered containers. 3. Wet mop and/or vacuum with HEPA filtered vacuum before leaving work area. 4. Remove isolation of HVAC system in areas where work is being performed.
Class III	<ol style="list-style-type: none"> 1. Remove or isolate HVAC system in areas where work is being done to prevent contamination of duct system. 2. Complete all critical barriers i.e. sheetrock, plywood, plastic, to seal area from non-work area or implement control cube method (cart with plastic covering and sealed connection to work site with HEPA vacuum or vacuuming prior to exit) before construction begins. 3. Maintain negative air pressure within work site utilizing HEPA equipped air filtration units or exhaust fans. 4. Contain construction waste before transport in tightly covered containers. 5. Cover transport receptacles or carts. Tape covering unless solid lid. 	<ol style="list-style-type: none"> 5. Do not remove barriers from work area until completed project is inspected by the Safety Manager and Infection Control Nurse and thoroughly cleaned by the Environmental Management staff. 6. Remove barrier materials carefully to minimize spreading of dirt and debris associated with construction. 7. Vacuum work area with HEPA filtered vacuums (contractor). 8. Wet mop area with disinfectant (contractor). 9. Remove isolation of HVAC system in areas where work is being performed.

C l a s s I V	<ol style="list-style-type: none"> 1. Remove or isolate HVAC system in areas where work is being done to prevent contamination of duct system. 2. Complete all critical barriers i.e. sheetrock, plywood, plastic, to seal area from non-work area or implement control cube method (cart with plastic covering and sealed connection to work site with HEPA vacuum or vacuuming prior to exit) before construction begins. 3. Maintain negative air pressure within work site utilizing HEPA equipped air filtration units. 4. Seal holes, pipes, conduits, and punctures appropriately. 5. Construct anteroom and require all personnel to pass through this room so they can be vacuumed using a HEPA vacuum cleaner before leaving work site or they can wear cloth or paper coveralls that are removed each time they leave the work site. 6. All personnel entering work site area required to wear shoe covers. Shoe covers must be changed each time the worker exits the work area. 7. Do not remove barriers from work area until completed project is inspected by the Safety Office and Infection Control and thoroughly cleaned by the Environmental Management Service. 	<ol style="list-style-type: none"> 10. Remove barrier material carefully to minimize spreading of dirt and debris associated with construction. 11. Contain construction waste before transport in tightly covered containers. 12. Cover transport receptacles or carts. Tape covering unless solid lid. 13. Vacuum work area with HEPA filtered vacuums (contractor). 14. Wet mop area with disinfectant (contractor). 15. Remove isolation of HVAC system in areas where work is being performed.
-------------------------------------	--	---

NOTE: Steps 4 through 14 as follows are addressed by the Risk Assessment Team.

Step 4. Identify the areas surrounding the project area, assessing potential impact.

<i>Unit Below</i>	<i>Unit Above</i>	<i>Lateral</i>	<i>Lateral</i>	<i>Behind</i>	<i>Front</i>
Risk Group	Risk Group	Risk Group	Risk Group	Risk Group	Risk Group

Step 5. Identify specific site of activity, e.g., patient rooms, medication room, etc.

Step 6. Identify issues related to ventilation, plumbing, electrical in terms of the occurrence of probable outages.

Step 7. Identify containment measures, using prior assessment. What types of barriers? (E.g. solid wall barriers); Will HEPA filtration be required?

(Note: Renovation/construction area shall be isolated from the occupied areas during construction and shall be negative with respect to surrounding areas.)

Step 8. Consider potential risk of water damage. Is there a risk due to compromising structural integrity? (E.g., wall, ceiling, roof)

Step 9. Work hours: Can or will the work be done during non-patient care hours?

Step 10. Do plans allow for adequate number of isolation/negative airflow rooms?

Step 11. Do the plans allow for the required number and type of hand washing sinks?

Step 12. Does the infection control staff agree with the minimum number of sinks for this project? (Verify against AIA Guidelines for types and area)

Step 13. Does the infection control staff agree with the plans relative to clean and soiled utility rooms?

Step 14. Plan to discuss the following containment issues with the project team. E.g., traffic flow, housekeeping, debris removal (how and when).

Infection Control Construction Permit					
Project Title:			Project No:		
Location of Construction:			Project Start Date:		
Project Coordinator:			Estimated Duration:		
Contractor Performing Work:			Permit Expiration Date:		
Supervisor:			Telephone:		
YES	NO	CONSTRUCTION ACTIVITY	YES	NO	INFECTION CONTROL RISK GROUP
		TYPE A: Inspection, non-invasive activity.			GROUP 1: Low Risk
		TYPE B: Small scale, short duration, moderate to High levels.			GROUP 2: Medium Risk
		TYPE C: Activity generates moderate to high Levels of dust, requires greater 1 work Shift for completion.			GROUP 3: Medium/High Risk
		TYPE D: Major duration and construction Activities requiring consecutive work Shifts.			GROUP 4: Highest Risk
Class I		1. Execute work by methods to minimize raising dust from construction operations. 2. Immediately replace any ceiling tile displaced for visual inspection. 3. Minor demolition for remodeling.			
Class II		1. Provides active means to prevent air-borne dust from dispensing into atmosphere. 2. Water mist work surfaces to control dust while cutting. 3. Seal unused doors with duct tape. 4. Block off and seal air vents. 5. Wipe surfaces with disinfectant (in-house staff) 6. Contain construction waste before transport in tightly covered containers. 7. Wet mop and/or vacuum with HEPA filtered vacuum before leaving work area. 8. Place dust mat at entrance and exit of work area. 9. Remove or isolate HVAC system in areas where work is being performed.			
Class III Date: Initials:		1. Obtain infection control permit before construction begins. 2. Isolate HVAC system in area where work is being done to prevent contamination of the duct system. 3. Complete all critical barriers or implement control cube method before construction begins. 4. Maintain negative air pressure within work site utilizing HEPA equipped air filtration units or exhaust fans. 5. Do not remove barriers from work area until complete project is thoroughly cleaned. 6. Vacuum work area with HEPA filtered vacuums. 7. Wet mop with disinfectant. 8. Remove barrier materials carefully to minimize spreading of dirt and debris associated with construction. 9. Contain construction waste before transport in tightly covered containers. 10. Cover transport receptacles or carts. Tape covering. 11. Remove or isolate HVAC system in areas where work is being performed.			
Class IV Date: Initials:		1. Obtain infection control permit before construction begins. 2. Isolate HVAC system in areas where work is being done to prevent contamination of duct systems. 3. Complete all critical barriers or implement control cube method before construction beings. 4. Maintain negative air pressure within work site utilizing HEPA equipped air filtration units. 5. Seal holes, pipes, conduits, and punctures appropriately. 7. All personnel entering work site are required to wear shoe covers. 8. Do not remove barriers from work area until complete project is thoroughly cleaned. 9. Vacuum work area with HEPA filtered vacuums. 10. Wet mop with disinfectant. 11. Remove barrier materials carefully to minimize spreading of dirt and debris associated with construction.			

	6. Construct anteroom and require all personnel to pass through room so they can be vacuumed using HEPA vacuum cleaner before leaving work site, or they can wear cloth or paper coveralls that are removed each time they leave the work site.	12 Contain construction waste before transport in tightly covered containers. 13 Cover transport receptacles or carts. Tape covering. 14 Remove or isolate HVAC system in areas where work is being done.
Additional Requirements:		<div>Date:</div> <div>Initials:</div>
_____ Exceptions/Additions to this permit are noted by attached memoranda.		<div>Date:</div> <div>Initials:</div>
Permit Request By: Date:		Permit Authorized By: Date:

Infection Control Orientation – Construction Service Workers

The goal of the Infection Control program is to identify and reduce the risks of acquiring and transmitting infections among patients, employees, physicians, and other licensed independent practitioners, contract service workers, volunteers, students, and visitors.

During construction, renovation and minor improvement projects, hidden infectious disease hazards may be released into the air, carried on dust particles or on clothing – for example, fungal organisms such as, *Aspergillus*. *Aspergillus* species may be found in decaying leaves and compost, plaster and drywall, and settled dust. These organisms usually do not cause problems in healthy people, but a hospital is full of sick patients! *Aspergillus* and other fungal organisms can cause illness and even death in cancer treatment patients, and patients with lung problems or poor immunity. Therefore, it is critical that you do your part to keep our patients, employees, and visitors as safe and healthy as possible. We, in turn, will make conditions as safe as possible for you.

1. Medical Waste:

- a. We will remove any medical waste, including sharps containers (for used needles and syringes), from construction areas prior to the start of the projects.
- b. If you (contract workers) find any needles, syringes, sharp medical objects, please notify Infection Control Nurse (X-7206) **IMMEDIATELY**.

1. Barrier Walls:

- a. The construction areas **MUST** be kept separated from patient care areas by barriers that keep the dust and dirt inside the worksite.
- b. The walls must provide a complete seal of the construction area from adjacent areas (walls may be rigid or 4 or 6 mil thickness plastic).

1. Environmental Control:

- a. Negative air pressure must be maintained within the construction area.

- b. Demolition debris is removed in tightly fitted covered carts – use specified traffic patterns.
- c. Sticky or walk-off mats are placed immediately outside the construction zone and changed whenever necessary to control the spread of dust and dirt.
- d. Exterior window seals are to be used to reduce the amount of outside excavation debris coming into the building.
- e. If demolition chutes are used, they must be sealed when not in use; the chute and damper should be sprayed with water, as necessary to maintain dust control.
- f. Control, collection and disposal must be provided for any drain liquid or sludge found when demolishing plumbing.

1. Traffic Control:

- a. Use designated entry and exit procedures.
- b. Keep all egress pathways free of debris.
- c. No unauthorized personnel should be allowed to enter construction areas.
- d. Use designated elevators only.

1. Cleaning:

- a. Keep the construction area clean on a daily basis.
- b. Dust and dirt **must** be kept to a minimum.

1. Workers:

- a. Clothing must be free of loose soil and debris when exiting the construction area.
- b. Use personal protective equipment (masks, face shields, etc.) as required for the task at hand.
- c. Hand washing is the best method of reducing the transmission of infection: always wash your hands with soap and water after visiting the restroom, before eating, when leaving the construction site.

Questions? Please feel free to call Infection Control at ext. 7206.

 <h2 style="margin: 0;">JUSTIFICATION FOR PROPOSED FIELD STATION ISSUE</h2> <p style="margin: 0;"><i>(Except forms and form letters)</i></p>
