

# Introducing Acrovyn® 4000 Chameleon™ Simulated Wood and Metal Collection

*Now PVC-free and even more realistic*

Acrovyn Chameleon™ offers the industry's best looking, most durable simulated patterns available today. **The Chameleon's patterned ink and base material are completely free of PVC,** and Acrovyn 4000's new contemporary texture makes **our wall guards look even more realistic.** The smooth texture is easy to clean. Chameleon is 20 times more durable than stained wood.

Our tough, easy to clean Chameleon Collection is available on most of our products, including doors, wall coverings, wall guards and wall panels, ensuring a totally coordinated look for your interior.

Our exclusive fusion bonding process means Acrovyn 4000 simulated wood patterns won't wear, scratch or peel off. It becomes integral with the Acrovyn material.

Acrovyn Chameleon's surface cleans easily with non-abrasive cleaners.

Acrovyn Chameleon patterns are 20x more durable than stained wood and 4x more durable than laminate.

All Chameleon patterns for Acrovyn wall guards and wall coverings are MBDC Cradle to Cradle Certified™ Silver.
