

### **Salient Characteristics**

The Togus VA Medical Center has a need for decontamination equipment in case of an emergency activation. This is a brand name justification as the VA requires the following Sentinel XL kit with the configuration described below in order for kits to be compatible with existing equipment. Please include any spec sheets, pamphlets and/or brochures with your quotation submission.

We estimate that the order will be for (40 ea.) of these kits, however this number may fluctuate based on the final quotation amounts due to funding constraints.

Please also note on your quote whether this will be shipped F.O.B. Destination or F.O.B. Origin (**along with any applicable shipping charges**).
