

VA259-17-R-0801 A00004 Questions and Answers

What is the voltage that is required for the new Generator?

Manufacture and enclosed - 400 KW (465.7 KVA minimum) Generator

- Natural Gas
- 1000 amp/ 3 PH / 4 wire/ 208 volt minimum
- 200 KW initial transfer amount (minimum)
- 1000 transfer switch

Are there any drawings that have any details as to where it is going in relationship to the building that it is supplying? What are the distances from the building to the generator pad?

No. Installation of concrete pad: placed approximate 15 feet from the building with ready access to buildings electrical and gas connections. The building's stepdown transformer is located in the same area approximately 10 feet from the proposed generator pads as well.

What type of gear are we going to be feeding with this generator?

Proposed generator will be used as a backup generator to power the building's infrastructure (including HVAC) and computer systems throughout. Currently the building is being utilized as commercial office space.

Are there any site pictures?
