

1) Does anyone know the thickness of asphalt that will need sawed?

Concrete pad is supposed to be 6 inches in accordance with the contract that put it in a couple of years ago. Asphalt is also supposed to be 6 inches.

2) On the Ductile piping 6" and 8" do you have the spec for the piping? There are several classes and pricing does run with the different classes

Requested information can be found in Specification 33 10 00 Water Utilities, Section 2.1 Ductile Iron Pipe and Fittings

3) It is our understanding the contractor will be able to shut the job area down. Will we have to have a way for the Laundry service to come in and out of the area?

Both the SOW and Specifications 01 00 00 Section K require the successful bidder to erect a security fence around the project area. Provisions have been made for the Laundry to use an alternate route during the repairs to the water line.
