

Salient Characteristics

Haag Streit Accessories (Brand Name or Equal)

BQ (AT900) Automatic Tonometer or Equal

The automatic tonometer is an accessory to the slit lamp used for measuring the ocular pressure and shall meet the following minimum requirements.

Features:

Measurement Range: 0-80 mm Hg

Measurement Deviation: 0-58.84 mN and amounts to a maximum of +/- 1.5% and to a minimum of +/- 0.49 mN of the nominal value (in the prism).

50/50 Beam Splitter or equal

The beam splitter splits the beam of light emitted by the slit lamp so that a secondary attachment, such as an observer tube, can be used and recorded with the camera simultaneously.

Features:

- Interfaces with the digital camera (IM 900) for documentation
- 100% of light reaches the observer when the splitter is not interposed

Short Observer Tube or equal

The short observer tube is an accessory that allows a second person (i.e. colleague, student, technician, etc.) to observe the examination alongside the physician.

Warranty Requirements

Manufacturer must offer a 1 year warranty that product is free from defects in materials and workmanship. All defects will be replaced or repaired by the manufacturer at no cost to the buyer.
