High Density Open Frame Racks:

- Shall be constructed from 1" tubular, galvanized, powder-coated steel in color cream RAL #9001 or material of equal strength and durability.
- Rack units should be of the following dimensions. 26-1/8" deep by 18" wide by 78" high
- Shall have non-marking casters with a minimum diameter of 2.5".
- Shall use support rails or telescopic slides capable of supporting heavy consumable medical supplies (e.g. bags of intravenous [IV] fluid). Some examples of acceptable materials may include injection molded
- acrylonitrile butadiene styrene (ABS) or ball bearing reinforced telescopic slides. Racks shall be able to hold up to 9 dividable bins or 9 instrument trays on rollers per section.
- Shall support bins of varying depths constructed of injection molded

- acrylonitrile butadiene styrene (ABS) with the dimensions of 40cm x 60cm. Bins shall be of open design to minimize dust collection.
- A minimum of three bin heights is required with at least a 2.5 cm difference in height between each size (e.g. 5cm, 10cm, and 20cm). Bins must be machine washable able to withstand PH-neutral and slightly alkaline detergents and disinfectants. The bins must be heat resistance with a max continuous of 70C and max short term of 90C. The maximum load per bin is 40 kg.
- Shall include adjustable bin levels to maximize storage capacity with adjustments at 6.5 cm.
- Shall include only horizontal basket rails for maximizing storage capacity. The rails should be of the type which will allow for the baskets to be placed on an angle of 30 degrees or more for easy access and enhanced viewing of supplies once the baskets are extended out at full length. Permanently angled baskets are not acceptable as it does not allow for the maximization of storage space.
- Shall include dividers in each bin which can be customized to various lengths.
- Shall include dividers that lock into the bin to eliminate any divider movement.
- Shall include 2 bin stops to prevent a bin from falling when pulled out.
- Bin shall be modular and spacing easily adaptable to accommodate future inventory growth and/or item proliferation.
- Shall not require any special installation requirements that affect the structure of each supply room, including but not limited to special flooring, wall reinforcement, height of ceiling/clearance, and sprinkler code requirements. All open high-density storage must have a max height of 198cm.
- Baskets must have ergonomic grip handles that will accommodate insertable color coded plastic strips. The handles should be constructed of injection molded acrylonitrile butadiene styrene (ABS) and should fit securely across the front ledge (lip) of each basket and shall be easily gripped to assist in the movement of the basket in and out. The colored strips must be exchangeable with the following colors but not limited to Red, Yellow, Orange, Emerald, Lime, White, Gray, Colonial Blue, Mauve, Pink, Lavender, Teal, Gold and Peach.
- Wire instrument shelves must be able to be mounted on ball bearing glides.
