

### Salient Characteristics

- Each bladder scanner should be accompanied with **a mobile stand** with basket
- Quick auto location of bladder- the machine should be able to identify the mid bladder
- Self-diagnostic (Alerts when any hardware/maintenance issues)
- Should have a casing around the transducer
  - Shall have a rear grip on probe (especially for bariatric patients) so there is no need to use the “fanning” technique which takes more time to obtain the image
- Crack resistant polycarbonate material (for durability due to the fact this is consistently used on every urology patient)
- Internal aluminum shell (Also for durability)
- Printer for Bladder Scanner system
- Latex free
- Trade in/discount for existing scanners.
