This is a brand name or equal to purchase description. Items comparable to the brand name will be acceptable if they meet the below salient characteristics.

Salient Characteristics

Plate reader that can measure absorbance over a range of wave lengths in the visible range (200 to 950 nm); UV range (230 to 260 nm); fluorescence and luminescence with high sensitivity, accuracy and timely fashion.

Requirement for performing assays using both cuvettes and plate readers (6, 12, 24, 96 and 384 well plate) including using low volume samples (Nano liters), automated reagent dispenser, heating and cooling system with humidity control, temperature control, carbon dioxide and oxygen regulation with minimal evaporation.

Designed for applications including ELISA, quantification of DNA, RNA and protein, transient expression assays, cell counting, BRET, confluency measurements, migratory ability of cells, wound healing ability of cells, time resolved fluorescence, FRET, Fluorescence polarization, automated live cell imaging, counting and confluence in response to treatment with various drugs. Assays will be performed in real time over a period of time.

User and Service Manuals

The vendor shall provide a complete printed set as well as electronic version of operator manuals, service manuals, electronic schematics, troubleshooting guides and parts list for all items. These manuals will include all components and subassemblies, including those not manufactured by the vendor.
