Question:

RFI Plan Sheet Reference: **Sheet S102** (7th Floor Framing Plan)

Sheet S102 shows the structural steel proposed to support the patient lift systems for the above listed project. There are several structural beam sizes shown. It is unclear what is new (proposed) structural steel & what is existing structural steel per the framing plan. Please advise if the contractor is only to provide & install the W8 beams referenced in Note 2 (Framing Plan Notes) on Sheet S102.

Answer

The member sizes in dark text shown on 1/S102 are the new beams to be installed. The member sizes in halftone shown on 1/S102 are existing for reference. What is new and what is existing is clearly shown on detail 2/S102.

I think this is the last question:
