Qty	Description
1	<p>Revolution CT EX Configuration</p> <p>Revolution CT EX configuration is a breakthrough that delivers high-definition image quality and unique clinical capabilities through the convergence of coverage, spatial resolution, temporal resolution and dose performance – all in one. Until now, CT users have had to compromise between systems that could only provide a sub- set of these capabilities.</p> <p>The Revolution CT delivers industry leading technical specifications for a premium CT system, including:</p> <ul style="list-style-type: none">• VHD reconstruction, 3D Collimator, and focal aligned detectors provide high-definition image quality, while overcoming the challenges of typical wide detector systems such as cone beam artifacts, HU uniformity, scatter and beam hardening artifacts.• ASiR-V provides integrated advanced iterative reconstruction technology that reduces noise and reduces low-signal streak artifact at very low signal levels. This technology is designed to deliver reduced noise levels, improved low contrast detectability and may enable a reduction in dose for all clinical applications. In clinical practice, the use of ASiR-V may reduce CT patient dose depending on the clinical task, patient size, anatomical location and clinical practice. A consultation with a radiologist and a physicist should be made to determine the appropriate dose to obtain diagnostic image quality for the particular clinical task. <p>Clinical Highlights</p> <p>(To achieve the full benefits described below, an AW workstation or server with post processing tools may be required. Please consult with your GE sales representative)</p> <p>Cardiovascular</p> <ul style="list-style-type: none">• One-Beat , High definition, motion free coronary images at any heart• Whole heart coverage at 160 mm allowing temporal and contrast uniformity across the whole volume.• Smart Phase: Analyzes the motion of the coronaries throughout the volume to auto-select the best cardiac phase with the least motion.• SnapShot(TM) Freeze temporal enhanced acquisition: A Intelligent motion correction acquisition technique that is designed to provide a 6x reduction of motion-blur while maintaining high spatial resolution and is demonstrated in cardiac phantom testing. The reduction in motion artifacts is comparable to a 0.058s equivalent gantry rotation speed with effective temporal resolution of 29 msec, as demonstrated in mathematical phantom testing.• Arrhythmia management: The system can monitor and alert the user to these situations and also recommend turning on a challenging patient mode. This mode avoids scanning during an irregular beat and can further rescan during the next regular beat using the same contrast bolus.• Best-in-class spatial resolution at 18.2lp/cm in z-direction and 14.8lp/cm in X-Y direction (measured at 2% MTF).

Qty	Description
	<p>This spatial resolution provides clear images to help the physician with tasks such as accurately quantifying stenosis in coronary and other vascular structures.</p> <ul style="list-style-type: none"> • One-Beat, comprehensive cardiac assessment allows for acquiring motion free coronaries, rest or stress perfusion and functional data in a single beat , giving you a comprehensive assessment and potentially reducing the need for additional imaging tests. Integrated beam hardening reduction capabilities allows for accurate perfusion assessment. The ability to perform stress perfusion with motion free CCTA in a single exam can potentially reduce unnecessary dose by not requiring a rest perfusion exam in case no defects are found in the stress perfusion. • Whole organ dynamic perfusion: This allows perfusion acquisition of the heart or other organs and tissues with uniform contrast along with integrated beam hardening reduction. The scanner also allows for a flexible aperture size and sampling rate during dynamic perfusion acquisitions. Revolution CT also allows for the ability to acquire a prospectively gated dynamic perfusion acquisition of the whole heart using up to 16 cm of coverage. • The scanner is also capable of 4D imaging to acquire morphology and perfusion information from a single exam. This can help assess conditions such as congenital heart disease and visualize blood flow through vascular structures. • TAVR planning: Dedicated TAVR/TAVI protocols allow for mixed acquisitions of the heart, aorta, and femoral arteries, with ECG-gated axial scans and non-ECG- gated axial or helical scans, using only one injection of contrast media, covering 700 mm of anatomy in less than 10 seconds. • Calcium Scoring: The system also allows single beat acquisition for cardiac calcium scoring • Triple RuleOut™: The system allows for robust Triple Rule Out studies with motion free coronaries, PE & aorta evaluation in a single exam. The system can cover the entire thorax anatomy in less than three seconds to provide contrast uniformity at low dose. <p>Neurology highlights</p> <ul style="list-style-type: none"> • Routine non-contrast whole brain scans can be performed in a single rotation without moving the table. VHD reconstruction technology ensures CT number uniformity across the whole brain coverage. Iterative MMAR can reduce the beam hardening artefacts at bone / brain interface and posterior fossa region. Enhanced Contrast can achieve excellent grey white matter differentiation. • Smart Stroke, the stroke-dedicated hardware, software and post-processing solution on Revolution CT, can help physicians to reduce “CT scan-to-report” time and “door-to-treatment” time, thus to save more brain tissue of patient with stroke. (Post processing solutions are optional purchases) • Whole brain CT perfusion with 70kVp, ASiR-V, smart collimation and variable sampling can acquire temporally uniform dynamic blood flow information to achieve accurate volumetric perfusion values at lower dose.

Qty	Description
	<ul style="list-style-type: none"> • Single phase or dynamic 4D whole brain CTA can be acquired within a single exam of whole brain CT perfusion to achieve comprehensive functional and anatomical assessment of the brain. <p>Body highlights</p> <ul style="list-style-type: none"> • Whole organ diagnosis and follow-up of organs such as the liver, kidneys, and pancreas is enabled by dynamic acquisition modes. The scanner can also acquire multiple images at the same location over time to provide a 4D view to assess vascular flow to these organs. • Fast body scans enabled by multi-volume 16cm acquisition with excellent image quality allows for reduced breath hold times and shallow breathing. Dose is minimized through the ability to select collimations between 5 mm and 160 mm personalized to each patient. • Low Dose Lung Cancer Screening protocols <p>Emergency & Trauma</p> <ul style="list-style-type: none"> • The system allows for robust Triple RuleOut™ acquisition for all patients providing One-Beat , high definition, motion free coronaries, PE and aortic dissection in a single exam covering the entire thorax in less than three seconds. ECG gating and mA modulation along with flexible collimations enable low dose acquisition personalized to the patient. • Flexible scanning modes with 160 mm axial scan, 80 mm helical scan, table speeds as fast as 300 mm/s, and short inter-group scan delay allows for ultra-fast and versatile whole body and multi-group scanning, thus reducing the effect of breathing and other motion during the poly trauma scan. • Smart Trauma with clinical ID can enable recon priority for trauma scans, prospective DMPPR settings and faster reconstruction throughput. <p>Pediatrics</p> <ul style="list-style-type: none"> • Split second pediatric trauma acquisition of abdomen/pelvis is enabled by wide 160 mm z-coverage, thus reducing the need for sedation and eliminating unnecessary repetition of rescanning young children due to failed sedation, as is the case in 29% of conventional exams, shown in a large trial (British Journal of Anesthesia, 84 (6), 743-8 (2000)) • 70kV scan mode allows for minimizing dose to pediatric patients while preserving excellent contrast to noise ratio and image quality. <p>Musculoskeletal Imaging</p> <ul style="list-style-type: none"> • The Revolution CT can acquire high definition images of the bone with excellent details. Multi-Material Artifact Reduction (MMAR) technology can significantly reduce artifacts from metal objects such as screws and plates. • 4D dynamic imaging mode can acquire kinetic studies to assess joint articulation up to 16cm coverage. <p>Dual Energy Capability</p> <p>Revolution CT features protocols which allow easy configuration of back to back Axial or helical</p>

Qty	Description
	<p>scans of the same anatomy my at two different X-ray energies (kVp's). To further improve registration accuracy patient immobilization may be utilized. The additionally acquired dual energy data can be post-processed on AW Workstation using Add/Sub function to gain additional clinical information.</p> <p>Key Hardware Components</p> <p>Gemstone Clarity Detector</p> <p>The Gemstone Clarity detector features a unique focally aligned layout of the detector sub-modules and a 3D collimator (post patient) to minimize scatter artifacts, ensure HU uniformity & reduce beam hardening artifacts associated with wide coverage systems. Combined with VHD reconstruction technology, the system delivers excellent image quality at full 160 mm coverage to enable whole organ imaging. The Gemstone Clarity detector also features a revolutionary ultra-low capacitance photo diode with new ASIC technology that redefines electronic noise at the quantum limit to less than 3 photons @ 120 keV (3100 electrons). The detector includes acquisition electronics which allow 4x faster bandwidth and 3x faster trigger rate than previous generations and reduces electronic noise by 25% which may improve image quality and reduce artifacts in low signal conditions as may be encountered in large patients. 3D Collimator Scatter Reduction Technology reduces scatter to primary ratio by more than 50% (R Melnyk, J Boudry, X Liu, and M Adamak, "Anti-scatter grid evaluation for wide-cone CT," Proc. of SPIE, Vol. 9033, 90332P1-7, 2014) and results in significant improvement in image quality and reduction in beam hardening and metal artifacts.</p> <p>Gemstone Clarity detector specifications:</p> <ul style="list-style-type: none"> • Z-Coverage/360 degree rotation: 160 mm • Number of slices: 512 • Number of detector rows: 256 • Number of detector elements: 212,992 cells with individual electronic/DAS channels • Sampling rate: Up to 2,496 views per rotation (Up to 8914 Hz) • Electronic noise: less than 3 photons noise (3100 electrons) • Effective analog to digital conversion range >2,000,000:1 • Scintillator speed: 0.03us (100 times faster than GOS) • Afterglow: 0.001% (4 times lower than GOS) • Radiation damage: 0.03% (20 times less than GOS) • Scatter to Primary Ratio: <10% • Detection efficiency: 98% @ 120 kV <p>Performix HDw tube</p> <p>The Performix HDw tube is a next generation anode-grounded, metal-ceramic x-ray tube. The tube enables improved spatial resolution via dynamic in-plane focal spot deflection and independent control of the focal spot size in both X and Z-axis which optimizes the focal spot to</p>

Qty	Description
	<p>deliver consistent beam quality across the full 160 mm Z-axis coverage, making it one of the most innovative CT tubes offered today. The design is optimized for exams requiring a large number of scans without tube cooling. It is powered by an onboard high frequency generator capable of ultra-fast kVp switching. Due to the ultrashort exposure times associated with wide coverage scanning, traditional metrics related to tube cooling such as anode heat content & cooling rate lose their relevance. The GE Performix HDw tube includes a standard license that automatically enables the use of tube dependent advanced applications. The use of a third party X-ray tube will require an additional license for the activation of these features.</p> <p>Ultra-fast kV Switching Generator</p> <p>The new generator features 3x faster rise and fall times for kV switching compared to previous generator. This would allow for more time to be spent at the target energy levels and result in better energy separation between the datasets acquired at different kV levels using fast kV switching.</p> <ul style="list-style-type: none"> • Generator maximum peak power: 103 kW • Tube current range: 10-740 mA with 5 mA increments • Tube voltage: 70, 80, 100, 120, 140 kV. Automatically selected through kV Assist based on patient body habitus and examination type • Max x-ray tube assembly heat content: 5.0 MJ (6.8 MHU) • Max continuous heat dissipation: 3.0 kW • Focal spot size according to IEC 60336/2005: 1.0 x 0.7mm, 1.6 x 1.2mm, 2.0x1.2mm <p>Gantry and Slipring</p> <p>Revolution CT's gantry platform has been designed from the ground up to support the demands of today's scanning environment. Exclusive Whisper Drive system technology reduces audible noise during gantry rotation at 0.28s by more than 50% compared to a typical belt driven system thus improving patient comfort (audible gantry noise is measured at 69 dBA).</p> <p>The contactless slipring transfers power and data to and from the rotating side of the gantry (slip ring) to the stationary side through contactless RF technology. This eliminates carbon dust due to brush wear- out in typical CT systems thereby increasing the reliability of the system. In addition, the gantry frame features redundant fail-safe mounts for all major components that is designed and tested to stringent standards to ensure safe and reliable operation even at fast rotation speeds.</p> <ul style="list-style-type: none"> • Aperture: 80 cm • Focus-to- detector Distance: 109.7 cm • Focus-to- isocenter Distance: 62.6 cm • Scan FOV: 50 cm • Rotation speeds: 0.28s, 0.35s, 0.5s, 0.6s, 0.7s, 0.8s, 0.9s, 1.0s per 360° acquisition • Temporal resolution: 140ms cardiac temporal resolution without using SnapShot Freeze. 29ms

Qty	Description
	<p>effective temporal resolution using SnapShot Freeze.(As demonstrated in mathematical phantom testing)(AW workstation or server with CardIQ Xpress 2.0 required to process SnapShot Freeze data)</p> <ul style="list-style-type: none"> • Data chain bandwidth: 40 Gbps • Table and gantry control panels: Define both internal and external scan planes to +/- 1 mm accuracy. Activated any time during exam (with tube stationary) • Front and rear integrated gantry LCD Display: Display patient information, ECG data from the integrated ECG module, built-in patient breathing lights and countdown timer, cardiac gating indicator light and patient information videos • Flexible cable manage system with coordinated straps attached to the gantry sides to keep cables connected to the gantry away from the floor and to reduce clutter <p>Operator Console</p> <p>The Revolution CT scanner desktop allows simultaneous scanning, image reconstruction, display, processing and analysis, as well as networking and archival.</p> <p>It features the new "Clarity Operator Environment" designed with your everyday needs in mind. The environment allows for more real time adaptive capabilities thus enabling dramatically improved timing with Smart Prep including automatically transitioning to acquisition in as quickly as 1 second when the set HU threshold is reached. The benefits provided by the new interface include:</p> <ul style="list-style-type: none"> • Smart prescription workflow automates scan set up by recommending scan parameters specific to the patient based on scout attenuation and ECG information, in the case of cardiac, to enable consistent image quality & dose performance across scans, irrespective of the technologist expertise level • Seamless multi-tasking through ability to have multiple patient sessions open with one active patient for acquisition and the rest for post-acquisition tasks • "Plan ahead" task list as part of scan setup automates repetitive tasks such as reconstructions, image transfer, image processing, etc. without requiring technologist intervention • Ability to prospectively prescribe multi planar reconstructions for anatomies such as spine as part of the protocol, thus automating the workflow seamlessly • Clear status visibility across all automated patient tasks without any interaction enables you to focus on the primary task at hand • Manage your patient flow better with the ability to pre- pare scan prescription for the next patient while the current patient is getting off the table • Quickly select scan protocols through global search, anatomical selection or user specific favorites in the newly designed protocol management system • Facilitates protocol consistency by controlling access to changes and simplifying inputs

Qty	Description
	<p>required</p> <ul style="list-style-type: none"> • Integration with AW allows prescribing automatic image processing steps to be performed on the AW / AW Server post acquisition • Better dose awareness through clearly visible real time projected dose indicator for the selected protocol <p>Operator console specifications</p> <ul style="list-style-type: none"> • Intel Xeon performance processor: 2.60GHz/8-Core CPU (or equivalent) • Nvidia high performance GPU (or equivalent) • 64 GB DDR3 unbuffered ECC (or equivalent) • 24 inch dual monitors with screen resolution of 1920x1200 • Image data storage up to 700,000 uncompressed DICOM images (512x512) • Scan data storage of 1 TB (up to 1500 scan files are supported) • DVD-ROM (supports DVD-R, DVD-RW, DVD+R, DVD+RW, DVD+R DL, CD-R, CD- RW) • USB 3.0 Port for External Hard Disk Drive Connectivity (scan data storage and image data storage are supported) • Recon Server Xstream enables recon task parallelism and achieves up to 1.8x faster reconstruction throughput than Recon Server Pro • Image reconstruction speed up to 65 fps with FBP and up to 25 fps with ASiR-V. <p>System Software</p> <p>Smart Flow</p> <p>Simplified, automated scan prescriptions, personalized to the patient and easy-to-use reference protocols make the Revolution CT fast and efficient in patient set-up, prescription & scanning. The following features further help you streamline your workflow.</p> <p>Protocol Management System</p> <p>Protocols can be copied, built and edited intuitively using the Protocol Management System.</p> <ul style="list-style-type: none"> • GE Reference Protocol: A set of predefined protocols for adult patients that cannot be modified but can be copied and used. These protocols are factory installed. They have been developed in collaboration with clinical partners to provide users with a convenient and clinical relevant starting point for tailoring your departmental protocols. • Recently Scanned Protocols: A copy of the last 90 protocols reside exactly as they were used for review purposes only. These protocols can also be copied and used within into your departmental protocols. • Anatomical Selector: Use the Anatomical Selector area to select a specific anatomical region to show only protocols related to that region. • Favorites: A user can add to a list of favorite protocols commonly used by your site. <p>Clinical ID</p>

Qty	Description
	<p>Clinical ID is designed to streamline the clinical application specific workflow from protocol setup to reconstruction prioritization and automated reformatted views for timely diagnostic decisions.</p> <p>AutoVoice™</p> <p>Auto Voice provides recorded breathing instructions for the patient. Consistent breathing instructions assist with more precise timing during an exam. Auto Voice also provides a pre-message in the SmartPrep feature. The system also comes equipped with microphones at the console and gantry for communicating with the patient. The system has three, pre-recorded messages in ten selectable languages that cannot be deleted. You can also record up to 17 additional messages for each language. Default language options include: Chinese, English (Female) , English (Male), French, German, Italian, Korean, Japanese, Spanish (European), Spanish (Latin America).</p> <p>Smart Patient Centering</p> <p>The smart patient centering feature helps to detect suboptimal centering prior to the diagnostic scan. When scout is acquired, the system will assess patient centering. If the patient is off-centered greater than 2 cm, the system will display the table height location and an up or down arrow to indicate the elevation needed to reach that height.</p> <p>SmartStart (TM)</p> <ul style="list-style-type: none"> • Gantry-mounted start scan button and countdown display, • Facilitates single-technologist operation by allowing start of scan at the gantry, with a visual reminder of time until X-ray initiation <p>SmartPrep™ with Dynamic Transition</p> <p>Enables real-time monitoring of IV contrast and a user-selectable mode to dynamically transition to the diagnostic scan phase when a user entered Enhancement Threshold is reached in the Transition ROI.</p> <p>Trauma Patient entry</p> <p>Allows patient scans and image display/analysis without entering patient data before scanning.</p> <p>Prospective Exam Split</p> <p>Prospective Exam Split allows operator to specify how to split images from a scan into separate requested procedures/accession numbers in protocol management. This capability is especially useful in cases of full body trauma or for chest, abdomen and pelvis exams. Prospective Exam Split works with primary, secondary and reformatted images.</p> <p>Smart DMPR</p> <p>Smart DMPR can automatically generate reformatted views with prospectively set window width and window level and automatically transferring these image datasets to the designated PACS destination for fast review and diagnosis.</p> <p>Digital Tilt</p> <p>The system has preset protocols that can be selected prospectively, which allows images to be</p>

Qty	Description
	<p>reconstructed at a specified tilt angle. This capability, combined with organ dose modulation and tilted head holder accessory for the patient allows for reducing the dose to sensitive organs such as the eyes while also reducing dental artifacts.</p> <p>Enhanced Xstream Injector (Requires a compatible Bayer or Nemoto Injector system)</p> <p>The Enhanced Xstream Injector provides synchronization of the start of the scan and the start of the contrast injector using the start scan button on the Scan Control Interface or the gantry controls. The Enhanced Xstream Injector also allows setting of the contrast injector parameters within the CT scan protocol and creation of an Injector Report at End Exam of what was delivered by the injector. The system and injector are operated independently after the start scan button is pressed on the system.</p> <p>System Software</p> <p>Volume High Definition Reconstruction</p> <p>The system features state of the art image reconstruction technology designed to mitigate cone beam artifacts associated with wide coverage systems. In addition, the algorithm preserves temporal uniformity and provides excellent image quality at full 160 mm coverage. It further reduces variation in iodinated contrast HU uniformity across the full 160 mm Z coverage, typically caused due to heel effect. In addition, Multi-Material Artifact Reduction (MMAR) technology utilizes material physics learnings from GSI incorporated in single energy acquisition. In conjunction with the 3D Collimator, this reduces beam hardening artifacts due to iron, bone, metal & other dense objects.</p> <p>Iterative Reconstruction: ASiR-V</p> <p>Integrated advanced iterative reconstruction technology (ASiR-V) reduces noise, even at very low signal levels. The ASiR- V algorithm focuses primarily on the modeling of the system noise statistics, objects, and physics and de-emphasizes the modeling of the system optics. The most time-consuming portion of the IR process is the modeling of the system optics. By excluding the most time-consuming component, system optics, and focusing on the other terms during the IR process, significant image quality improvement can be achieved with- out paying a large penalty in reconstruction speed. The advanced system noise model includes the modeling of the data acquisition system (photon noise and electronic noise) as well as noise characteristics of the reconstructed images. The photon noise model includes characterization of the photon statistics as it propagates through the imaging chain. The modeling of the reconstructed image noise includes characterization of the scanned object, using information obtained from extensive phantom and clinical data. This technology is designed to deliver reduced noise levels, improved low contrast detectability and may enable up to 82% reduction in dose when compared to FBP for all clinical applications.</p> <p>Smart Dose technologies</p> <p>Automatic Exposure Control (AEC)</p> <p>AEC is a versatile and powerful tool designed to tailor the scanner's radiation output to each patient based on the patient's size, age, shape and attenuation and the user's re- requested level</p>

Qty	Description
	<p>of image noise/quality criterion. AEC technology uses estimated patient attenuation values to adjust the mA dynamically in order to achieve the requested level of image noise/quality criterion.</p> <p>3D Dose Modulation Utilizing SmartmA</p> <p>Volumetric knowledge prior to scanning allows you to personalize protocols and optimize dose for every patient, large and small. During the scan, real-time, 3D dose modulation helps deliver consistent image quality because it automatically accounts for the changing dimensions of your patient's anatomy. In addition, the system provides guidance to assist in centering the patient to maximize the benefit of mA modulation.</p> <p>Organ Dose Modulation</p> <p>Organ Dose Modulation (ODM) builds on the SmartmA feature to enable even further patient dose reduction. By reducing the mA exposure profile as a function of the X-ray tube angle, radiosensitive organs towards the anterior surface of the patient, such as the eyes, breasts and thorax, can benefit from enhanced dose reduction while the overall image noise is still maintained.</p> <p>kV Assist</p> <p>kV Assist makes it easy to select optimal kV settings for the patient being scanned. It recommends tube voltage and current to achieve the lowest dose while meeting desired image quality goals.</p> <p>70 kV Scanning</p> <p>70 kVp scan mode enables low dose pediatric and small patient scans</p> <p>CG Modulated mA</p> <p>For cardiac applications, prospective ECG dose modulation automatically adjusts the mA to minimize the patient's exposure to X-rays – reducing mA, and thus dose, near the beginning and end of each prescribed phase range. Up to 3 phase ranges are selected within a heart cycle with different mA levels. The peak mA for the first phase range is automatically determined based on noise index set by the user. The user can also select the relative mA level for an optional second or third phase range, set as a percent of the mA level of the first phase range. This provides clear images and allows you to reduce dose yet provides motion free, high quality images for functional and anatomical analysis within a heart cycle</p> <p>Color Coding for Kids</p> <p>Based on the Broselow-Luten Pediatric System, the Color Coding for Kids was developed to help operator to select the correct pediatric CT protocol. The system divides the protocols into nine color zones based on height and weight, and incrementally increases scan technique as the patient's size increases. This arrangement of protocols assists you in reducing the variations in pediatric protocol selection. If the patient weight is unavailable, a Broselow-Luten Tape can also be used to obtain the weight based on the length.</p> <p>Smart Dose technologies</p>

Qty	Description
	<ul style="list-style-type: none"> • Smart Track: Advanced hardware and software for X-ray beam tracking minimizes patient dose. • Smart Beam: Optimizes X-ray beam filtration independently for body, head, and cardiac applications. • Soft Shutter: This capability reduces the over-beaming dose in helical scans by using an advanced reconstruction algorithm for helical scans that makes better use of acquired data through intelligent view weighting and back projection. • Dose Check: Provides the user with tools to help them manage CT dose in clinical practice and is based on the standard XR-25-2010 published by The Association of Electrical and Medical Imaging Equipment Manufacturers Association (NEMA). Dose Check provides the following: <ul style="list-style-type: none"> o Checking against a Notification Value if the estimated dose for the scan is above your site established value o Checking against an Alert Value where the user needs specific authority to continue the scan at the current estimated dose without changing the scan parameters if the estimated dose exceeds the alert value o The ability to define Alert Values for Adult and Pediatric with age threshold o Audit Logging and Review capabilities o Protocol Change Control capabilities provided by robust protocol management interface <p>- DoseWatch Explore is an introductory dose management software application that provides you secure access, via any PC with internet access, to dose and protocol data from this system. An InSite connection to the system and completion of the registration process is required to use the DoseWatch Explore application. For US and Canadian Customers, this quotation includes access to the DoseWatch Explore application for a period of time concurrent with the system warranty.</p> <ul style="list-style-type: none"> • Dose Computation, Display & Reporting: CTDIvol (CTDI volume), DLP (Dose Length Product), and Dose Efficiency computation and display during scan prescription provide dose information to the operator. Dose Reporting saves the CTDIvol, DLP, and phantom type in a DICOM Structured Dose Report and a secondary screen capture. Series and cumulative exam values are saved. Saved values can be networked or archived. <p>DICOM Interchange</p> <p>DICOM Interchange allows the saving of any image from the database, along with a PC viewer using Internet Explorer, to a CD-R or DVD-R without marking the exam/series or image as archived for exam transfer between stations that are not networked or pass along to referring physicians or patients. 1	<p>Enhanced Xstream Integrated Injector Interface Kit - Class IV</p> <p>Xstream Injector provides one handed synchronized start of the scan and injection from the CT Operators console or from the scan room providing consistent simultaneous start of contrast injection and scan acquisition protocols.</p> <p>It utilizes the CiA Class 4 functionality which includes the following benefits:</p> <p>Up to a 50% reduction in the number of user interface selections needed when compared to systems not utilizing the Xstream Injector. The 50% reduction comes from the fact that users select one button to start the scan acquisition and injection.</p> <ul style="list-style-type: none"> o Better control of contrast enhancement by synchronizing start time of the contrast injection and CT scan o Improved workflow by enabling single-button start of both the injector and scanner from the scanner o Injection parameter preview from the scanner console prior to beginning the scan o Post-study review of injection results from the scanner console o Automatic documentation of injection results in PACS.
1	<p>Neuro MultiPhase CTA Protocols</p> <p>Neuro Multiphase CTA Protocols</p> <ul style="list-style-type: none"> • Neuro Multiphase CTA protocols is the group of CT acquisition protocols for multiphase CT angiography, an imaging tool that provides three time-resolved images of pial arterial filling in the whole brain, that can be used to predict clinical outcomes in patients with acute ischemic stroke. • Neuro Multiphase CTA Protocols is the purchasable option of Revolution CT 2016 summer release.
1	<p>HyperDrive on Revolution CT</p> <p>HyperDrive is an unmatched high pitch scan mode on Revolution CT that combined wide coverage acquisition with high pitch helical techniques to achieve speeds up to 437mm/s with uncompromised 50 cm field of view and image quality. This additional scan mode is especially beneficial in trauma or pediatrics environments.</p>
1	<p>GSI Xstream on Revolution CT</p> <p>GSI Xstream is the first volume spectral CT technology with integrated and simplified workflow you can make part of your daily practice.</p> <p>GSI Xstream utilizes ultrafast kVp switching x-ray source (0.25msec switching between two different energy levels of X-rays from view to view during a single rotation) and ultra-fast response Gemstone Clarity Detector to acquire almost perfectly registered volumetric dual energy CT data. The data is then processed through projection domain material decomposition algorithms to generate material density maps (MD), monochromatic images (MC) and virtual unenhanced images (VUE). This data can be utilized to identify material specific differences in attenuation in terms of Water, Iodine, Calcium, Uric Acid, Fat and Hydroxyapatite (HAP)</p>

Qty	Description
	<p>basis-pair images, allowing monochromatic and material representations. Metal Artifact Reduction (MAR) algorithms can also be applied to all GSI images to reduce artifacts due to the presence of metal.</p> <p>GSI Xstream can provide:</p> <ul style="list-style-type: none"> • Nearly perfect temporal and spatial registration to avoid mis-registration artifacts due to motion in dual energy CT (0.25ms) • Advanced material differentiation, classification and quantification • Optimization of contrast-to-noise ratio (CNR) by using monochromatic images • Reduction in artifacts due to beam hardening and metal. • Volume GSI Acquisition across 80 mm collimation with 50 cm FOV • 245mm/s GSI scan speed with 1.5:1 pitch • Dose neutral with ASiR-V integration • Integrated with GE's Smart Technology suite of workflow tools: GSI Assist and Clinical ID standardize and automate protocol selection, including direct transfer to PACS • Parallel processing of GSI images with Recon Server Xstream for improved workflow • 10 Native GSI recons: keV, VUE, MD: Iodine, MD: Water, MD: Calcium, MD: Fat, MD: Uric Acid, MD: HAP, GSI MAR, 140kVp with automatic network to PACS and AW GSI viewer when needed.
1	<p>Revolution CT SmartStep with Monitor Fluoro Package</p> <p>SmartStep for Revolution CT enables an imaging mode for performing biopsies and other interventional procedures. A 24 inch in-room monitor, hand held controller, X-ray exposure foot pedal and cradle handle provide in-room control for image acquisition and image review.</p> <p>The hand-held controller provides the operator with controls to prepare the scanner for imaging, to turn alignment lights on and off, to move the cradle, review images and adjust the window width and level; and the foot pedal provides in-room control of X-ray exposure.</p> <p>A highly functional image display presents a set of 3 Interventional Images in 3 viewports, a viewport for scout and localizer, a free viewport, and timers for the remaining and accumulated time, real time dose information. The display control panel provides roam, zoom, magnify, measurement, annotation, grid, image orientation, and save screen image review capabilities.</p> <p>SmartStep for Revolution CT utilizes a cine pulse acquisition mode using 5 mm (8x0.625 mm), 10 mm (16x0.625 mm), and 20 mm (32x0.625 mm) detector configurations. All kVp stations (from 70kVp to 140kVp) and scan fields of view are compatible. Prospective image reconstruction includes 1i mode, overlap 3i mode and non-overlap 3i mode.</p> <p>System Includes the In-room Monitor & Boom.</p>

1	<p>CT Main Disconnect and UPS Control 380-480V 50 60Hz 125A</p> <p>Main Disconnect Panel (MDP) UL 125A 400/480V 50/60Hz 3 phases for CT, PET and PETCT</p> <p>The (Main Disconnect and UPS Control Panel serves as the main facility power disconnect source installed ahead of the CT system PDU. On systems where the optional partial system UPS is included in the system, the panel provides NEC mandated UPS emergency power-off control function via a UPS control cable included with the UPS. The optimized design PDB saves time, installation labor, and valuable mounting space by consolidating the main circuit breaker, control power source and required warning lights into a compact factory manufactured panel. The panel provides short circuit protection, overload protection and National Electrical Code and Canadian Electrical Code required emergency shutdown for the system. The 24-volt low voltage controls all power, using either the panel cover mounted EMERGENCY OFF push button or the remote EMERGENCY OFF push button included with each system. The PDB is painted to match the imaging system for a total coordinated system appearance. Available in a combination surface/semi-flush mounted enclosure. The system provides stock availability of otherwise special-order devices, saving time and installation costs.</p> <p>Benefits</p> <ul style="list-style-type: none"> • The System Main Disconnect saves time, installation labor, and valuable mounting space by
