

Attachment A – LGY DevOps LGY Product List

Loan Guaranty (LGY) is the program level system which is comprised of a number of child applications that all interact together to provide the VA home loan benefit. We release all child applications together as an LGY release, not separate child releases. webLGY is the main LGY child application to manage eligibility for loans, appraisals, loan processing or guaranty, and foreclosures. SIM is a child application to store the Stakeholder information needed for the LGY applications. AM is the Access Manager component that gives roles and functionalities to various users and user types. SAHSHA is the grant application for recording and providing the SAH and SHA grant benefits to disabled veterans. VIP (to be replaced by LGY Hub) is the portal front-end to all the LGY applications. eBenefits portlets are the Certificate of Eligibility (COE) and Special Adaptive Housing (SAH) portlets for veterans to see benefit eligibility data or apply for an SAH grant via the eBenefits portal.

System Acronym	System Description	System Name
FFPS	The Funding Fee Payment System (FFPS) is a stand-alone web application that has its own authentication method (PIV for VA users and user ID and password for external users). This external application is used by VA LGY employees and external mortgage lenders and allows a lender to make their VA funding fee payment online for veterans who closed on a VA Home Loan.	Funding Fee Payment System
SAHSHA	Special Adaptive Housing / Special Housing Adaptation (SAHSHA) is a web application that is a sub application of LGY and is accessed via the LGY front-end application (either VIP or LGY Hub). It is used by VA LGY employees and inspectors outside of the VA to manage SAH grant information for veterans applying for and/or receiving grants to adapt their housing. There are two types of grants SAH and SHA thus the acronym SAHSHA.	Special Adaptive Housing / Special Housing Adaptation
SIM	Stakeholder Information Management (SIM is a web application that is a sub application of LGY and is accessed via the LGY front-end application (either VIP or LGY Hub). It is a website used by LGY VA employees to manage business partner information such as lenders, appraisers, inspectors, servicers, and Native American tribes. That data is essential for the other LGY applications.	Stakeholder Information Management
AM	Access Manager (AM) is a web application that allows assignment of roles or functionalities for certain LGY applications to VA and external users. This application also provides reporting on changes to user access/privileges. It is an intranet application, used by limited VA employees and ISOs, however the data is used/checked every time a user of LGY web applications tries to access a function to see if they are authorized to use the function. This is a WebLogic Java application.	Access Manager
VALERI-R	VA Loan Electronic Reporting Interface – Redesign (VALERI-R) is a redesign of the currently contracted service that allows the VA to monitor and manage Veteran Home loans. VALERI-R interfaces with WebLGY and FMS. Data transmitted: Loan, default, liquidation, claim and acquisition data and property data.	VA Loan Electronic Reporting Interface Redesign
WebLGY	The Web Loan Guaranty (WebLGY) application is the primary LGY business support system. WebLGY is responsible for managing the core processes and data involved with the VA Home Loan program. It covers historical VA Home Loan records, determining eligibility for a VA loan, appraising a property for value, guaranteeing new VA loans and managing them through termination including several pieces of property management and oversight. WebLGY is an external application that is used by VA employees and external stakeholder partners including mortgage lenders and servicers. It is accessed via the LGY front-end application (either VIP or LGY Hub).	Web Loan Guaranty
LGY Hub	Loan Guaranty Hub (LGY Hub) is a generalized application designed to replace the VIP (Veterans Information Portal) which is the front-end application to other LGY (Loan Guaranty) applications and functions. All users will come to LGY Hub to access both internal and external LGY applications. It provides authentication by having the user login to Access VA (an IAM product) which uses PIV authentication for internal VA users and ID.me for 2 factor authentication for external users. Once authenticated LGY either takes the user to a screen to select which LGY application they want to use or sends them to a registration function to associate their user information with data in LGY to allow access. LGY Hub uses Access Manager to obtain role and functionality information for each user that logs in to determine which applications and functions they can use. It uses Java and Spring on the backend and React/Redux on the frontend	Loan Guaranty Hub
LGY EA	LGY EA (Enterprise Admin) – a web-based application used to manage global settings for LGY applications. Currently, only batch jobs, interface testing, and logger management is included. In the future, the application will be enhanced to include enterprise settings, letters, and other modules used by all LGY JEE applications	Enterprise Admin
