The replacement of the current voice recognition system is required to continue Radiology services. The current PACS System in the station is Philips. Current voice recognition is Talk Technology 4.1. The existing voice recognition system has greatly surpassed its specified lifecycle. It is currently slow and inaccurate. It has been identified by National VA with various Addendum issues sending to the Radiology Information System. It does not allow tele-reading of exams. It drastically restricts the radiologist's ability to read high volume number of exams which directly relates to patient care in backlogs.

Project Description: VA - Atlanta PS 360 Core including servers

Product

Change Healthcare
Radiology Solutions
