1	L20830 - iViz Ultrasound System	2

Featuring a seven-inch high-resolution display and proprietary imaging technology, SonoSite iViz provides superior image quality, allowing for quick interpretation and diagnosis. The system is not a consumer tablet, and is manufactured using aircraft aluminum for a rugged design and is drop-tested up to three feet. Damage-resistant glass protects the device from liquid ingress and may be cleaned with approved hospital grade disinfectants.

iViz has an ergonomic one-handed operation allowing for easy manipulation of image settings, especially useful in crowded environments or inside vehicles when space is a premium. In addition to workflow, iViz features M-Mode, Color Doppler and Color Velocity Doppler.

Image storage and system connectivity are accomplished through:

- 64 GB of on-board flash memory
- Micro Flash USB drive for sharing images to a PC or Mac
- DICOM package with the following functionality:
 - Store: capability to send images, clips and structured reports for storage on DICOM compliant archivers
 - Modality Worklist (MWL): provides interface with a MWL server to manage or download patient demographics from a worklist server
 - Embedded WIFI for transmission of images and information wirelessly
 - Bluetooth connectivity
- Interface ports: Micro USB, Micro HDMI, and Audio Out
- Tricify4 ultrasound cloud (one-year trial period)

System software updates are accomplished through a cloud server or USB upgrade.

With the purchase of iViz, you will receive:

- 1 iViz system
- 3 iViz batteries
- 1 Battery bay charger for two batteries
- 1 Protective case with kickstand
- 1 Carry case (soft and hard case options available)
