Question: I was reviewing a specification on the Dayton Ohio VA Project. I had a few questions about the specifications. In section 09 97 33.10 page 5 (resinous coatings systems for wall and ceilings) part 2-Products, the system description call for a Primer, 10 mil epoxy basecoat, vinyl chips, and an epoxy sealer. Is this correct? This is not a typical application for a walls and ceilings. Also in the formula description 2F aggregates- the spec calls out Solid/single color pigmented quartz blend. Pigmented quartz blends are different than vinyl chips and both are not usually applied to a wall/ceiling system. Can you please verify what the wall/ceiling epoxy systems will be on this project.

Response: Specifications Section 09 97 33.19 – RESINOUS COATING SYSTEMS FOR WALLS AND CEILINGS has been revised to clarify epoxy type and remove reference to aggregates. Page 5 of the specifications will be reissued via Addendum.
